

Goals of the Study

This study aimed to formulate a futuristic plan for the next 25 years for the development of undergraduate health education with its all specialties to comply with international criteria and to be able to graduate qualified health personnel that are needed by the job market and satisfy the requirements of development process in the health field in the Kingdom of Saudi Arabia. This will be fulfilled through achieving the following goals:

1. Evaluation of undergraduate health education outcomes in the kingdom in terms of numbers and specialties, and the extent of their suitability to job market as well as the international standards, currently and in the future.
2. Delineating the features of futuristic study plans that conform to the modern trends of undergraduate health education and fulfill societal needs of qualified national health personnel.
3. Studying educational environment for students in health colleges and suggesting the appropriate solutions for its reform.
4. Studying the undergraduate health education trends in developed countries and devising special trends for the Kingdom of Saudi Arabia taking into consideration the job market and developmental directions.
