

INTRODUCTION:

The diagnosis of skin diseases is deceptively easy. Doctor's examine or are shown patients every day in clinical rotations. Almost every patient has some skin abnormality. This course will enable student to identify these abnormalities or ask for assistance. We hope that you find this course useful and enjoyable. To achieve maximum benefit of the course hand work and attentiveness are the keys for this target.

OBJECTIVES:

1. Medical students should first study the basics of dermatology which includes skin anatomy learning the primary and secondary lesions and be familiar with the language of dermatology
2. To gain to enable them to recognize the most common skin diseases and their management
3. To be familiar with the diagnostic laboratory test pertinent to dermatology
4. To help students to formulate a differential diagnosis of lesions.
5. To gain an over view of the skin manifestation of systemic diseases
6. To be able to manage emergency dermatologic diseases like: Urticaria, blistering diseases, drug eruption, TEN

Teaching Methodology:

The course lasts for 6 w. It contains 8 lectures that include many topics that fulfill the required objective.

Each lecture will be delivered by a faculty member who covers the theoretical part of the topic and followed by 30-45 minute slide session.
