

Session 3: Statistical functions and tools

To show the available statistical functions in Excel 2003, we follow

Insert → functions → statistical

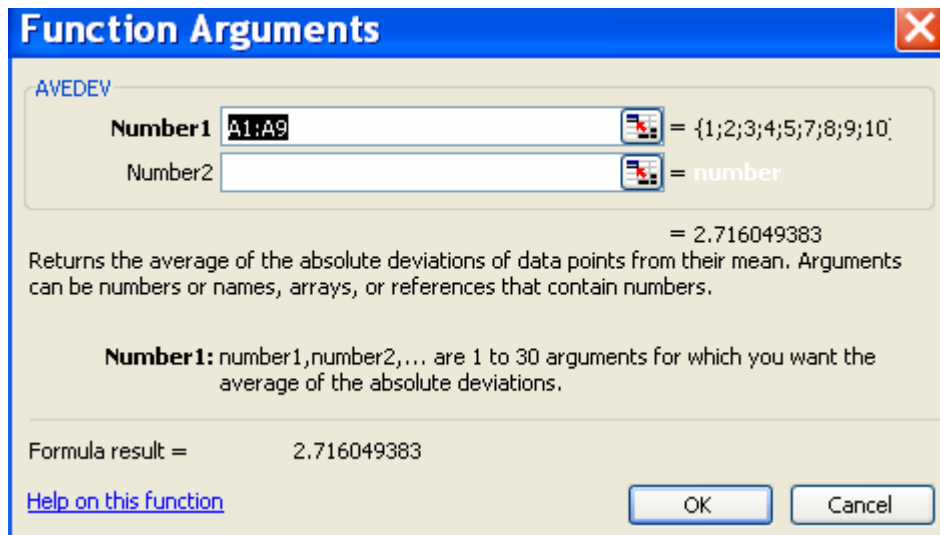

We get

In order to use any of these functions, you may use the help as shown in the above box.

Example :

We may use the function AVEDEV to calculate the average of the data given in column A as follows

Exercise:

Give an example to run each of the statistical function based on a given data set.
