

Sitecore eCommerce module

The Sitecore eCommerce module is fully integrated with Sitecore version 5.2. The module uses Sitecore functionality and the user interface is therefore recognizable and easy. No frames and no pop ups!

The Sitecore eCommerce module is rich in functionality and have an API that easily can be integrated with payment solutions and internal systems such as factoring, ERP etc. The module takes use of standard Sitecore technology. It uses templates, masters and renderings to input and output data. This makes it flexible for the client regarding layout.

Some of the functions included are:

- Basket solution with optional password protection system.
- Customer profile system with order history etc
- Categories. Make as many as you want and in a hierarchy
- Products and product attributes
- Related products
- VAT system with possibilities of as many different VAT as you want
- Weight calculations
- Bundling of products
- Customer email system. Communicate with your customers
- Dynamic text on all buttons, titles and texts - uses the built in language system in Sitecore to create a multi language shop.
- Order system. See orderstatus, change orderstatus, print orders.
- Productsearch
- Automatic email confirmation to both customer and vendor at purchase
- Possibility of payment integrations
(require external arrangements with payment vendors)
- Possibility of integration with internal ERP systems (require extra consulting and adjustments)

Set up is easy. The module is delivered as a standard Sitecore package and can be installed in minutes. Requirements are only a Sitecore version 5.2 installation. The module is also available for the 4.3 version

Full documentation for both technical staff and end user is included in English.
