

KING SAUD UNIVERSITY

College of Computer & Information Sciences

DEPARTMENT OF COMPUTER SCIENCE GRADUATION PROJECT PROPOSAL

For Academic Year/Semester: 1. Part: 1426/1427 F Sem.
2. Part: 1426/1427 S Sem.

A. GENERAL INFORMATION

- A1. Supervisor(s): Dr. Aqil Azmi
 - A2. Project Title: An Islamic Portal
 - A3. Number of Students: 2
-

B. PROJECT ABSTRACT

English is the dominant language on the internet and similarly all web-mail systems works perfectly well with English and to a lesser extent with Roman based languages. Now when we move to languages which rely on different alphabet system, such as Arabic, the story is quite different. There do exists two Arabic based web-mails, gawab.com and maktoob.com. The former has a large user base (over 3 million), however, both systems lack some fundamental features and suffer from inherent deficiencies. In this project our objective is to come up with a better Arabic web-mail system with some nice features which does exist elsewhere. One such feature is the list of allowed senders, receiving a mail from a sender who is outside the group results in a rejected mail.

C. REQUIREMENTS (both hardware and software)

- (i) IBM PC or compatible
 - (ii) Familiarity of asp.net is a plus.
-

D. PROJECT PHASES

- Phase I: Study the existing system; define the requirements/features.
 - Phase II: Implement the system.
-

E. SCHEDULING OF PHASES

- Semester 1: Phase I
- Semester 2: Phase II
