

7.

Department

Internal Medicine

About us

The department of Internal Medicine is actively engaged in the care of the patients from local community. We provide primary care to many patients living in the area, the full range of sub-speciality care to local and regional patients, and state of the art innovations in many areas in medicine. This care is delivered in conjunction with clinical research programs and the clinical education of medical students that strives the highest levels of patient satisfaction and professionalism.

Vision & Mission

Advancing medicine for the health of the citizens of Al-kharj, Riyadh and beyond through quality patient care, innovative research and training the next generation of physicians and other healthcare providers. The department of Internal Medicine is a collaborative community. It will access the achievement and talent of its members to explore new ideas, enhance professional development and interact with community at large.

Chairman Message

Members of the department are involved in healthcare professionals at all levels (undergraduate school of medicine and public health, continuing medical education and allied health professional education). This actively includes efforts to develop and maintain a curriculum that is appropriate for the education of healthcare providers in the next century, and to enhance the effectiveness of the educational process through innovation. Our education programs enjoy an excellent reputation and have been recognized by School of Medicine, University of Texas.
