

**DRUG INTERACTIONS:** The blood pressure-lowering effects of nadolol are additive with other medications that lower blood pressure, and combinations of these other medications with nadolol often is used purposefully in treating persons with [high blood pressure](#). When used in combination with [diltiazem](#) (Cardizem; Tiazac; Dilacor), [verapamil](#) (Calan; Isoptin; Verelan; Covera), [amiodarone](#) (Cordarone), or [digoxin](#) (Lanoxin), however, nadolol or other beta-blockers can cause complete block of the heart's electrical system. [Nonsteroidal anti-inflammatory drugs](#) (NSAIDs) such as [ibuprofen](#) (Motrin; Advil) and [naproxen](#) (Naprosyn; Anaprox; Aleve), can prevent the blood pressure-reducing effects of beta-blockers such as nadolol.

**PREGNANCY:** There is very little information about nadolol given to pregnant women. Physicians may elect to use it if its benefits are deemed to outweigh potential risks.
