

## CHAPTER 8

### Potential Energy and Conservation of Energy

- One form of energy can be converted into another form of energy.
- Conservative and non-conservative forces

103 PHYS

Dr. Abdallah M. Azzeer

1

**Kinetic energy:** Energy associated with *motion*

**Potential energy:** Energy associated with *position*

#### Potential energy U:

- Can be thought of as stored energy that can either do work or be converted to kinetic energy.
- When work gets done on an object, its potential and/or kinetic energy increases.
- ⇒ There are different types of potential energy:
  - ✿ Gravitational energy
  - ✿ Elastic potential energy (energy in a stretched spring)
  - ✿ Others (magnetic, electric, chemical, ...)

103 PHYS

Dr. Abdallah M. Azzeer

2

### Gravitational Potential Energy

**Potential Energy (PE)**  $\equiv$  Energy associated with position or configuration of a mass.

Consider a problem in which the height of a mass above the Earth changes from  $y_1$  to  $y_2$ :

$W_{\text{grav}}=?$

UP  $\rightarrow W_g = -mg s = -mg (y_2 - y_1)$

Down  $\rightarrow W_g = +mg s$

$W_g = -mg (y_2 - y_1)$

103 PHYS Dr. Abdallah M. Azzeer 3

$mg y \equiv U_g \equiv \text{gravitational potential energy (PE)}$

$\rightarrow U_2 - U_1 = \Delta U$

$\rightarrow W_g = -mg (y_2 - y_1) = U_1 - U_2 = -\Delta U_g$

$W_g = -\Delta U_g$

Changing the configuration of an interacting system requires work  
example: lifting a book

The change in potential energy is equal to the negative of the work done

$\Delta U_g = -W$

But Work/Kinetic Energy Theorem says:  $W = \Delta K$

$W = -\Delta U = \Delta K$

$\Delta K + \Delta U = 0$

103 PHYS Dr. Abdallah M. Azzeer 4

**Total Mechanical Energy**

The change in potential energy is equal to the negative of the work done

$$\Delta U = -W$$

But Work/Kinetic Energy Theorem says:  $W = \Delta K$

$$W = -\Delta U = \Delta K \quad \Rightarrow \quad \Delta K + \Delta U = 0$$

$$\Delta K + \Delta U = 0$$

$$K_2 - K_1 + U_2 - U_1 = 0$$

$$K_2 + U_2 = K_1 + U_1 = \text{constant} = E \equiv \text{Total mechanical energy}$$

NOTE that the ONLY forces is gravitational energy which doing the work

*The sum of K and U for any state of the system = the sum of K and U for any other state of the system*

*In an isolated system acted upon only by conservative forces*

*Mechanical Energy is conserved*

103 PHYSDr. Abdallah M. Azzeer5

**Example 8.1**

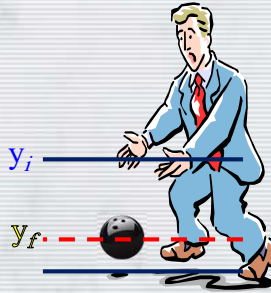

A bowler drops bowling ball of mass 7 kg on his toe. Choosing floor level as  $y=0$ , estimate the total work done on the ball by the gravitational force as the ball falls.

Let's assume the top of the toe is 0.03 m from the floor and the hand was 0.5 m above the floor.

$$U_i = mgy_i = 7 \times 9.8 \times 0.5 = 34.3 \text{ J}$$

$$U_f = mgy_f = 7 \times 9.8 \times 0.03 = 2.06 \text{ J}$$

$$W_g = -\Delta U = -(U_f - U_i) = 32.24 \text{ J} \approx 30 \text{ J}$$

103 PHYSDr. Abdallah M. Azzeer6

b) Perform the same calculation using the top of the bowler's head as the origin.  
Assuming the bowler's height is 1.8 m

What has to change?

First we must re-compute the positions of ball at the hand and of the toe.

Assuming the bowler's height is 1.8 m, the ball's original position is  $-1.3$  m, and the toe is at  $-1.77$  m.

$$U_i = mgy_i = 7 \times 9.8 \times (-1.3) = -89.2J$$

$$U_f = mgy_f = 7 \times 9.8 \times (-1.77) = -121.4J$$

$$W_g = -\Delta U = -(U_f - U_i) = 32.2J \cong 30J$$

103 PHYS

Dr. Abdallah M. Azzeer

7

### Elastic Potential Energy

$$\vec{F}_S = -k\vec{x}$$

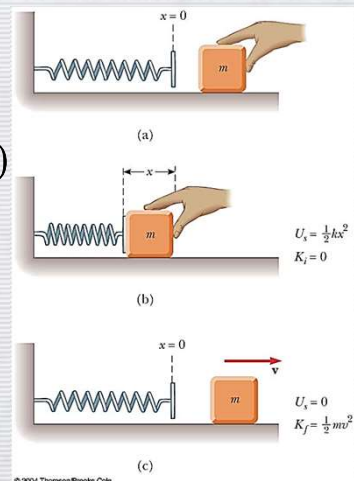

Work done by Spring

$$dW_S = \vec{F}_S \cdot d\vec{x}$$

$$W_S = \int_{x_i}^{x_f} \vec{F}_S \cdot d\vec{x} = \int_{x_i}^{x_f} (-kx) \cdot dx = -\frac{1}{2}k(x_f^2 - x_i^2)$$

$$U_S = \frac{1}{2}kx^2$$

$$\Rightarrow W_S = -\Delta U_S = -(U_{Sf} - U_{Si})$$

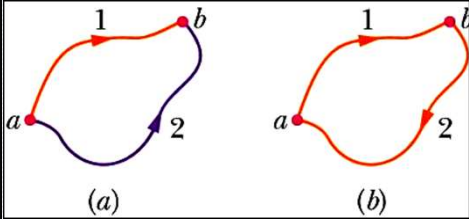

103 PHYS

Dr. Abdallah M. Azzeer

8

### Conservative Forces

(a) A force is conservative if work done by that force acting on a particle moving between points is **independent** of the path the particle takes between the two points

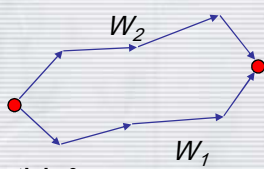

(b) The total work done by a **conservative force** is **zero** when the particle moves around any **closed path** and returns to its initial position

103 PHYS
Dr. Abdallah M. Azzeer
9

### Conservative Forces

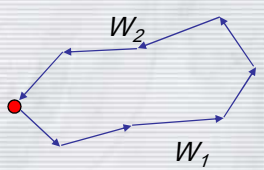

To repeat the idea on the last slide: We have seen that the work done by a conservative force does not depend on the path taken.

→  $W_1 = W_2$

Therefore the work done in a closed path is 0.

→  $W_{NET} = W_1 - W_2$   
 $= W_1 - W_1 = 0$

103 PHYS
Dr. Abdallah M. Azzeer
10

### Work done by gravity

• L:\103 Phys LECTURES SLIDES\103Phys Slides\_T1Y3839\CH7Flash

- $W_g = F \cdot \Delta r = mg \Delta r \cos \theta = mg h$
- $W_g = mgh$  (Depends only on h!)

$$W_{NET} = W_1 + W_2 + \dots + W_n$$

$$= F \cdot \Delta r_1 + F \cdot \Delta r_2 + \dots + F \cdot \Delta r_n$$

$$= F \cdot (\Delta r_1 + \Delta r_2 + \dots + \Delta r_n)$$

$$= F \cdot \Delta r$$

$$= Fh$$

$W_g = mgh$

**Depends only on h,  
not on path taken!**

### Non-conservative forces:

A force is non-conservative if it causes a change in mechanical energy; mechanical energy is the sum of kinetic and potential energy.

*Example: Frictional force.*

- ✳ This energy cannot be converted back into other forms of energy (irreversible).
- ✳ Work does depend on path.

*For straight line  $W = -fd$*

*For semi-circle path  $W = -f(\pi d/2)$*

Work varies depending on the path. Energy is dissipated

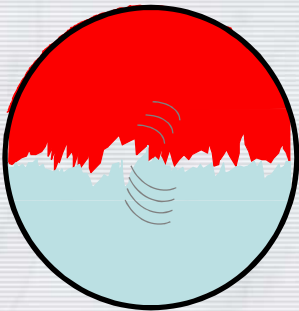

The presence of a non-conservative force reduces the ability of a system to do work (*dissipative force*)

**Energy dissipation: e.g. sliding friction**

As the parts scrape by each other they start small-scale vibrations, which transfer energy into atomic motion

The atoms' vibrations go back and forth—they have energy, but no average momentum. The increased atomic vibrations appear to us as a rise in the temperature of the parts. The temperature of an object is related to the thermal energy it has. Friction transfers some energy into thermal energy

The diagram shows a circular cross-section of a material. The top half is colored red, representing a surface that is being scraped. The bottom half is colored light blue. Concentric, wavy lines are drawn in the center, representing the atomic vibrations that occur as energy is transferred from the mechanical motion of the surface into the thermal energy of the material.

103 PHYS *Dr. Abdallah M. Azzeer* 13

When there is **NO** work done by **APPLIED FORCES** , the total mechanical energy is constant or **CONSERVED**

If  $W_a \neq 0 \rightarrow$

$$K_2 + U_2 = K_1 + U_1 + W_a$$

OR

$$\Delta K + \Delta U = W_{nc}$$

$W_{nc}$  = work done by **ANY** other forces than gravitational force spring forces (e.g. any applied non-conservative force or frictional force)

Three identical balls are thrown with the same initial speed from the top of a building.

*Total Energy*

$$E = K + U_g = \frac{1}{2} m v_0^2 + m g h$$

At  $y = 0$

$$E = \frac{1}{2} m v^2 = \frac{1}{2} m v_0^2 + m g h$$

$$v = \sqrt{v_0^2 + 2 g h}$$

$$v_0 = v_0 \cos \theta \hat{i} + v_0 \sin \theta \hat{j}$$

$$\hat{i} : v_x = v_0 \cos \theta$$

$$\hat{j} : v_y = v_0 \sin \theta - g t$$

$$y = h + v_0 \sin \theta \cdot t - \frac{1}{2} g t^2 = 0$$

$$t = \frac{v_0 \sin \theta + \sqrt{v_0^2 \sin^2 \theta + 2 g h}}{g}$$

$$v_y = -\sqrt{v_0^2 \sin^2 \theta + 2 g h}$$

$$v = \sqrt{v_x^2 + v_y^2} = \sqrt{v_0^2 \sin^2 \theta + 2 g h + v_0^2 \cos^2 \theta}$$

$$= \sqrt{v_0^2 + 2 g h}$$

- READ Quick Quiz 8.7 & 8.8

A ball connected to a massless spring suspended vertically. What forms of potential energy are associated with the ball–spring–Earth system when the ball is displaced downward?

103 PHYS

Dr. Abdallah M. Azzeer

17

- READ Example 8.2

A ball is dropped from a height  $h$  above the ground. Initially, the total energy of the ball–Earth system is potential energy, equal to  $mgh$  relative to the ground. At the elevation  $y$ , the total energy is the sum of the kinetic and potential energies.

103 PHYS

Dr. Abdallah M. Azzeer

18

**Example 8.3**

**Nose crusher?**

A bowling ball of mass  $m$  is suspended from the ceiling by a cord of length  $L$ . The ball is released from rest when the cord makes an angle  $\theta_A$  with the vertical.

- (a) Find the speed of the ball at the lowest point B.
- (b) What is the tension  $T_B$  in the cord at point B?
- (c) The ball swings back. Will it crush the operator's nose?

**Example 8.4**

(a) An actor uses some clever staging to make his entrance.

$M_{actor} = 65 \text{ kg}$ ,  $M_{bag} = 130 \text{ kg}$ ,  $R = 3 \text{ m}$

What is the max. value of  $\theta$  can have before sandbag lifts of the floor?

(b) Free-body diagram for actor at the bottom of the circular path. (c) Free-body diagram for sandbag.

$$K_f + U_f = K_i + U_i$$

$$\frac{1}{2} M_{actor} v_f^2 + 0 = 0 + M_{actor} g y_i$$

$$y_i = R - R \cos \theta = R(1 - \cos \theta)$$

© 2004 Thomson/Brooks/Cole

$$v_f^2 = 2gR(1 - \cos\theta)$$

How we can obtain  $v$ ????

$$\sum F_y = T - M_{actor}g = M_{actor} \frac{v_f^2}{R}$$

$$\Rightarrow T = M_{actor}g + M_{actor} \frac{v_f^2}{R}$$

For the sandbag not to move  $\Rightarrow a=0 \Rightarrow T=M_{bag}g$

$$\theta = 60^\circ$$

### EXAMPLE;

تعبّر سيارة كتلتها  $2500 \text{ kg}$  النقطة A بسرعة مقدارها  $10 \text{ m/s}$  وعندما تصل الي النقطة B تصبح سرعتها  $2 \text{ m/s}$  ، احسب متوسط قوة الاحتكاك التي تعوق السيارة.

$$\Delta K + \Delta U = W_{nc}$$

$$\left( \frac{1}{2}mv_B^2 - \frac{1}{2}mv_A^2 \right) + (mgh_B - mgh_A) = W_{nc}$$

$$-120,000 + 98,000 = F_k \cdot D$$

$$F_k = \frac{22,000}{50} = 440 \text{ N}$$

Physics

Dr. Abdallah M. Azzeer

22

٨- سقطت كرة كتلتها 200 g من ارتفاع 4 m على أرض مستوية فارتدت الى ارتفاع 2.5 m ، الطاقة الحركية التي فقدت في الارتطام هي :

(a) 2.95 J

(b) 4.90 J

(c) 7.85 J

(d) 12.70 J

٩- تبدأ سيارة كتلتها 1500 kg في الحركة الي أسفل من قمة مرتفع بسرعة 30 m/s وتصل الى الأسفل ثم تصعد الى أعلى قمة مرتفع آخروصل اليه بسرعة 20 m/s ، إذا كانت قمتي المرتفعين متساوية فإن الشغل المبذول بواسطة قوة الاحتكاك تساوي:

(a) 200,000 J

(b) 400,000 J

(c) 450,000 J

(d) 500,000 J

١٠- شاحنة كتلتها ثلاثة أضعاف كتلة سيارة وتتحرك ضعف سرعة السيارة . إذا كانت K تمثل الطاقة الحركية للسيارة فإن الطاقة الحركية للشاحنة هي:

(a) K

(b) 6K

(c) 12K

(d) 24K
