Final Exam
Academic Year 1441 Hijri- Second Semester

| Exam Information معلومات الامتحان |  |  |  |
| :---: | :---: | :---: | :---: |
| Course name | Modeling and Simulation |  | رهز اسمر |
| Course Code | OPER 441 | 441 بحت | رمز المقرر |
| Exam Date | 06 - May - 2020 | 13 رمضان 1441 هـ | تاريخ الامتحان |
| Exam Starting Time | 9:00 am | (الساعةّ 9:00 صباحا | وقهت بأ الامتحان الانحان |
| Exam Duration | 4 hours | 4 ساعات | مدة الامتحان |
| Classroom No. | Take Home Exam |  |  |
| Instructor Name | Dr. Khalid Alnowibet | د. خالد النويبت | اسم استاذ المقرر |

| Student Information معلومات الطالب |  |  |
| :---: | :---: | :---: |
| Student's Name |  | (اسم الطالب |
| ID number |  | الرقم الجامعي |
| Section No. |  | رقم الثبّة |
| Serial Number |  | الرقم التسلسلي |
| General Instructions |  | تتليمات عامة: |

1. This is a TAKE-HOME EXAM that will be sent to you by email.
2. You MUST immediately reply the same email to confirm receiving the exam paper.
3. You will receive the exam paper as an electronic attachment via your KSU-email by 8:45 am on Wednesday May 6, 2020 sent to you by the instructor's email knowibet@ksu.edu.sa only.
4. The duration of the exam is four hours. Starting from 9:00 am. The last time for submitting and receiving your answers is 1:15 pm Wednesday May 6, 2020. Any answers sent after this time will not be considered and the student will be marked as ABSENT in the Final Exam.
5. This a take-home exam, so you will have full access to the lecture notes, the text book, and Excel for your answer.
6. DO NOT copy/paste from the lecture notes. You MUST create your own answers based on what you learned and what you read from the resources of the course.
7. You are the guardian of your behavior in this Exam. This Final Exam is totally for your independent effort. Do not attempt to collaboration or communication with anyone about the questions of the exam, it is totally not allowed by any means. If similarities are spotted between two or more students, all of the students involved will get ZERO on the questions with similarity.
8. You MUST fill out the cover page with your information. Write your answers on a word document and email the document on PDF and WORD format. Write the subject of the email as:

## OPER-441-Final-Exam <<Section Number>> , << your name>> , <<your KSU ID >>

9. Put all you of answers in one document and one Excel file with all worksheets. In Excel file, put each question in a separate worksheet with the name Q1, Q2, Q3, ... If you have part of the answers on excel, capture the answer from the screen and insert it in the document.

## Question \#1:

A trader is investing his budget in stock market. He has an investment portfolio with three different companies: CO-A, CO-B and CO-C. The current situation of his portfolio is shown in the following table. By the end of every day, the change in closing price for each share varies between $-10 \%$ to $8 \%$ as shown in the table. The investor wants to start with all company shares have about equal total value in the portfolio. This means that

| Current Portfolio | Percentage of Daily Price Change |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> value | Price <br> Per Share | $\mathbf{- 1 0 \%}$ | $\mathbf{- 5 \%}$ | $\mathbf{0 \%}$ | $\mathbf{3 \%}$ | $\mathbf{5 \%}$ | $\mathbf{8 \%}$ |
| CO-A | 200,000 | 32 SR | 0.1 | 0.2 | 0.3 | 0.2 | 0.15 | 0.05 |
| CO-B | 200,010 | 15 SR | 0.2 | 0.15 | 0.05 | 0.1 | 0.2 | 0.3 |
| CO-C | 200,070 | $95 S R$ | 0.05 | 0.15 | 0.2 | 0.3 | 0.2 | 0.1 |

(a) Let $\mathrm{PV}(\mathrm{n})$ be the portfolio value on day (n). Write a detailed algorithm to simulate $\mathrm{PV}(\mathrm{n})$.
(b) Using the following $U(0,1)$ numbers, simulation for 10 days to evaluate the average value of the portfolio in 10 days. Use the following table to evaluate the average value of the portfolio after 10 days.

| Day | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{U}(\mathbf{0}, \mathbf{1})$ | 0.266 | 0.547 | 0.325 | 0.514 | 0.951 | 0.721 | 0.33 | 0.481 | 0.961 | 0.358 |
| $\mathbf{U}(\mathbf{0}, \mathbf{1})$ | 0.342 | 0.657 | 0.785 | 0.603 | 0.793 | 0.677 | 0.87 | 0.362 | 0.08 | 0.231 |
| $\mathbf{U}(\mathbf{0}, \mathbf{1})$ | 0.996 | 0.959 | 0.237 | 0.669 | 0.382 | 0.594 | 0.845 | 0.583 | 0.629 | 0.806 |

(c) Form a data table in Excel to simulate the daily value of the portfolio PV(n) for one year. Then compute the Average monthly APV(n) with 95\% confidence interval and draw the empirical distribution of the $\mathrm{PV}(\mathrm{n})$ from the data table (fix your results in the data table). Put your results in an Excel sheet and <Past> the screen shot of Excel Data Table for first 20 days with numbers and with cell functions (Ctrl $+\sim$ ).
(d)Now consider the case where the distribution for the daily change of each share is given as a continuous variable as in the table below. Also, the investor will maintain the equal value for each share as in the table. Using Excel simulation, build a data table for one month ( 30 day) what is the simulated value of the portfolio by the end of the month. Put your results in an Excel sheet and <Past> the screen shot of model simulation table for first 20 days with numbers and with cell functions (Ctrl $+\sim$ ). Send the excel file with your answer sheet.

|  | Current Portfolio |  | Percentage of Daily Price Change is Normal distribution |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Total value | Price <br> Per Share | Mean $\boldsymbol{\mu}$ | Standard deviation $\boldsymbol{\sigma}$ |
| CO-A | 200,000 | 32 SR | $3 \%$ | $5 \%$ |
| CO-B | 200,010 | 15 SR | $6 \%$ | $10 \%$ |
| CO-C | 200,070 | 95 SR | $8 \%$ | $15 \%$ |

(e) Find the expected monthly value of the portfolio in part (d) for 100 months. Give the average monthly value and the $95 \%$ confidence interval. Put your results in an Excel sheet and <Past> the screen shot of model simulation table for first 20 days with numbers and with cell functions (Ctrl + ~). Send the excel file with your answer sheet.

## Question \#2:

Consider the CDF function for the random variable X:

$$
F(x)=\left\{\begin{array}{clr}
0 & ; & x<1 \\
\frac{(x-1)^{2}}{15} & ; 1 \leq x \leq 4 \\
1-\frac{(6-x)^{2}}{10} & ; 4<x \leq 6 \\
1 & ; \quad x>6
\end{array}\right.
$$

Answer the following:
(a) Derive an inverse transform algorithm for this distribution, and write the detailed algorithm for simulating from $\mathrm{F}(\mathrm{x})$.
(b) Let X be the time between arrival of buses in a given station (in minutes). Using the $\mathrm{U}[0,1]$ random number in the following table, using the inverse transform in part (b) to determine the arrival time of the $1^{\text {st }}$ ten buses. (Use uniforms as needed)

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{U}_{1}[0,1]$ | 0.485 | 0.389 | 0.601 | 0.374 | 0.808 | 0.527 | 0.533 | 0.532 | 0.122 | 0.854 |
| $\mathrm{U}_{2}[0,1]$ | 0.328 | 0.708 | 0.027 | 0.653 | 0.283 | 0.113 | 0.662 | 0.701 | 0.169 | 0.283 |
| $\mathbf{X}$ |  |  |  |  |  |  |  |  |  |  |
| Arrival <br> Time of |  |  |  |  |  |  |  |  |  |  |

(c) Assume that all buses are of the same size with maximum of 20 seats. Let N be the number of passengers on board in each bus arrived. Where N is random variable Geometric distribution with minimum 5 and max 20 . Write the inverse function of the N , and write the detailed algorithm for simulating from $f(\mathrm{~N})$ :

$$
f(N=n)=(1-0.9)(0.9)^{n} \quad ; \quad n=0,1,2, \ldots
$$

(d) Using Excel, data table in Excel and your answers, run a simulation model for 1000 bus to estimate average number of passengers arrived to the bus station per hour with the 95\% confidence interval (fix the results in Excel for the data table). Put your results in an Excel sheet and <Past> the screen shot of the model simulation table for first 20 days with numbers and with cell functions (Ctrl $+\sim$ ). Send the excel file with the answer sheet.

## Question \#3:

Consider the following probability density function:

$$
f(x)= \begin{cases}0.5 x-1 & 2 \leq x \leq 4 \\ 0 & \text { otherwise }\end{cases}
$$

(a) Compute the CDF of the function $f(\mathrm{x})$.
(b) Using your answer in part (a), Derive an inverse transform algorithm for this distribution.
(c) Let X be the time between calls to a call center. Using $\mathrm{U}[0,1]$ random number in the following table, use the inverse transform in part (b) to simulate the call arrival time of each customer.

| Call \# | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{U}[0,1]$ | 0.013 | 0.116 | 0.681 | 0.951 | 0.202 | 0.328 | 0.708 | 0.027 | 0.653 | 0.283 |
| $\mathbf{X}$ |  |  |  |  |  |  |  |  |  |  |
| Arrival <br> Time |  |  |  |  |  |  |  |  |  |  |

(d) Assume that the call center has one line. Simulate the call time spend on the line assuming that the call takes a random amount of time that follows the shifted $p d f$ :

$$
f(x)=\frac{2}{x^{3}} \quad ; \quad x>1 \quad \text { with shift parameter }=1 \mathrm{~min} .
$$

| Call \# | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Arrival <br> Time |  |  |  |  |  |  |  |  |  |  |
| U[0,1] | 0.370 | 0.143 | 0.978 | 0.067 | 0.232 | 0.052 | 0.691 | 0.173 | 0.276 | 0.137 |
| Call <br> Time |  |  |  |  |  |  |  |  |  |  |

(e) Estimate the percentage of calls answered from simulation output. Show all your answers on paper.
(f) Estimate average number of answered calls per hour from simulation output. Show all your answers on paper.
(g) The management decided to buy a new line. Show that the new line will affect the Expected average number of answered calls using simulation in (c) and (d). Show all your answers.
(h) Assume that the call center has one line and takes only 20 calls per day. Build a five different date table using Excel with 100 days for each table and compute:
a. percentage of calls answered with confidence $95 \%$ interval.
b. number of answered calls per hour with confidence 95\% interval.

| measure | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- |
| Ave. percentage calls answered |  |  |  |  |
| Ave. number calls answered per hour |  |  |  |  |

Your results will be something like:

|  | measure | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Data <br> Table \#1 <br> outputs | Ave. percentage calls <br> answered |  |  |  |  |
|  | Ave. number calls <br> answered per hour |  |  |  |  |
| Data <br> Table \#2 <br> outputs | Ave. percentage calls <br> answered | Ave. number calls <br> answered per hour |  |  |  |
| Data <br> Table \#3 <br> outputs | Ave. percentage calls <br> answered | Ave. number calls <br> answered per hour |  |  |  |
|  | Ave. percentage calls <br> answered |  |  |  |  |
|  | Ave. number calls <br> answered per hour |  |  |  |  |
| Data <br> Table \#5 <br> outputs | Ave. percentage calls <br> answered | Ave. number calls <br> answered per hour |  |  |  |

Finally write the summary for all 5 data tables:

|  | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- |
| Ave. percentage calls answered from <br> all data tables |  |  |  |  |
| Ave. number calls answered per hour <br> from all data tables |  |  |  |  |

Send the excel file with your answers sheet

## Question \#4:

SimAir is a local airline company that runs small jet airplanes between some local cities. Each airplane can take a maximum of 100 passengers. Past data shows that, for any flight, the number of confirmed booking seats follows a shifted binomial distribution with shift 60 and mean 30. In addition, the number of confirmed booking passengers may miss the flight for some reason and do not show at the time of departure. The number of " $\underline{n o-s h o w " ~ p a s s e n g e r s ~ i s ~ a ~ r a n d o m ~ i n t e g e r ~ t h a t ~}$ range between zero and $20 \%$ of the confirmed bookings. For every confirmed booking SimAir charge 750 SR. If the passenger did not show up he for his flight, he gets $50 \%$ refund. Also, any unbooked empty seat cost SimAir 250 SR.
(a) Write the total revenue for SimAir from flight ( n ) given the variables defined as follows:

- $X(n)$ : be the number of confirmed booking seats
- $\mathrm{Y}(\mathrm{n})$ : be the number of no-show passengers.
(b) Define all parameters needed for simulation in Excel in the following cells location:

|  | A | B | C | D |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ |  |  |  |  |
| $\mathbf{2}$ |  |  |  |  |
| $\mathbf{3}$ |  |  |  |  |
| $\mathbf{4}$ |  |  |  |  |
| $\mathbf{5}$ |  |  |  |  |
| $\mathbf{6}$ |  |  |  |  |

You can use screen shot from Excel for the same cells.
(c) Using the parameters you write in part (a), write in the following cell the Excel function that you will use to simulate number of confirmed booking seats. Your answered will be corrected based the cell location you used in (a).

|  | A |
| :--- | :--- |
| $\mathbf{1 0}$ |  |

(d) Using the parameters you write in part (a), write in the following cell the Excel function that you will use to simulate number of no-show passengers. Your answered will be corrected based the cell location you used in (a).

|  | B |
| :--- | :--- |
| $\mathbf{1 0}$ |  |

(e) Using data table in Excel and your answers, run a simulation model for 1000 flight to provide the following outputs (fix the result of data table in Excel):

- The average revenue per flight and the $95 \%$ confidence interval
- The average number of actual passengers boarded the airplane with the $95 \%$ confidence interval
- The empirical CDF of the revenue
- The empirical CDF for the actual passengers traveled on the airplane.

## General Instructions

تتعليمـات عامـة:

1. This is a TAKE-HOME EXAM that will be sent to you by email.
2. You MUST immediately reply the same email to confirm receiving the exam paper.
3. You will receive the exam paper as an electronic attachment via your KSU-email by 8:45 am on Wednesday May 6,2020 sent to you by the instructor's email knowibet@ksu.edu.sa only.
4. The duration of the exam is four hours. Starting from 9:00 am. The last time for submitting and receiving your answers is 1:15 pm Wednesday May 6, 2020. Any answers sent after this time will not be considered and the student will be marked as ABSENT in the Final Exam.
5. This a take-home exam, so you will have full access to the lecture notes, the text book, and Excel for your answer.
6. DO NOT copy/paste from the lecture notes. You MUST create your own answers based on what you learned and what you read from the resources of the course.
7. You are the guardian of your behavior in this Exam. This Final Exam is totally for your independent effort. Do not attempt to collaboration or communication with anyone about the questions of the exam, it is totally not allowed by any means. If similarities are spotted between two or more students, all of the students involved will get ZERO on the questions with similarity.
8. You MUST fill out the cover page with your information. Write your answers on a word document and email the document on PDF and WORD format. Write the subject of the email as:

## OPER-441-Final-Exam <<Section Number>> , << your name>> , <<your KSU ID >>

9. Put all you of answers in one document and one Excel file with all worksheets. In Excel file, put each question in a separate worksheet with the name Q1, Q2, Q3, ... If you have part of the answers on excel, capture the answer from the screen and insert it in the document.

## Question \#1:

| Rubric: $\mathbf{2 8}$ Points |  |
| :--- | :--- |
| $\mathbf{+ 2}$ Points-- (2) | Attempt to write something on PV(n)-- part (a) |
| $\mathbf{+ 3}$ Points-(5) | writing correct PV with detailed algorithm to simulate PV(n)-- part (a) |
| $\mathbf{+ 5}$ Points-(10) | Attempt to do short simulation by hand-- part (b) |
| $\mathbf{+ 2}$ Points-(12) | Writing the correct calculations for Simulation by hand-- part (b) |
| $\mathbf{+ 4}$ Points-(16) | Attempt to do simulation by Excel-- part (c) |
| $\mathbf{+ 2}$ Points-(18) | All output and results are correct in Excel simulation-- part (c) |
| $\mathbf{+ 3}$ Points -(23) | Attempt to solve the Extension -- part (d) |
| $\mathbf{+ 2}$ Points-(22) | Correct solution of Part (d) |
| $\boldsymbol{+ 3}$ Points-(25) | Attempt to solve part (e) |
| $\mathbf{+ 3}$ Points-(28) | part (e)-- All output in excel is done and correct |
| Total |  |

A trader is investing his budget in stock market. He has an investment portfolio with three different companies: CO-A, CO-B and CO-C. The current situation of his portfolio is shown in the following table. By the end of every day, the change in closing price for each share varies between $-10 \%$ to $8 \%$ as shown in the table. The investor wants to start with all company shares have about equal total value in the portfolio. This means that

| Current Portfolio | Percentage of Daily Price Change |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> value | Price <br> Per Share | $\mathbf{- 1 0 \%}$ | $\mathbf{- 5 \%}$ | $\mathbf{0 \%}$ | $\mathbf{3 \%}$ | $\mathbf{5 \%}$ | $\mathbf{8 \%}$ |
| CO-A | 200,000 | 32 SR | 0.1 | 0.2 | 0.3 | 0.2 | 0.15 | 0.05 |
| CO-B | 200,010 | 15 SR | 0.2 | 0.15 | 0.05 | 0.1 | 0.2 | 0.3 |
| CO-C | 200,070 | $95 S R$ | 0.05 | 0.15 | 0.2 | 0.3 | 0.2 | 0.1 |

(a) Let $\mathrm{PV}(\mathrm{n})$ be the portfolio value on day (n). Write a detailed algorithm to simulate $\mathrm{PV}(\mathrm{n})$.

CO-A $\rightarrow$ price change $C O-A=P C A=F^{-1}(u)=\left\{\begin{array}{c}-0.1 ; 0 \leq u \leq 0.1 \\ -0.05 ; 0.1<u \leq 0.3 \\ 0 ; 0.3<u \leq 0.6 \\ 0.03 ; 0.6<u \leq 0.8 \\ 0.05 ; 0.8<u \leq 0.95 \\ 0.08 ; 0.95<u \leq 1\end{array}\right.$
Closing value CO-A day ( n ) $=\mathrm{CVA}(\mathrm{n})=\operatorname{CVA}(\mathrm{n}-1) *(1+\mathrm{PCA}(\mathrm{n}))$

CO-B $\rightarrow$ price change $C O-B=P C B=F^{-1}(u)=\left\{\begin{array}{c}-0.1 ; 0 \leq u \leq 0.2 \\ -0.05 ; 0.2<u \leq 0.35 \\ 0 ; 0.35<u \leq 0.4 \\ 0.03 ; 0.4<u \leq 0.5 \\ 0.05 ; 0.5<u \leq 0.7 \\ 0.08 ; 0.7<u \leq 1\end{array}\right.$
Closing value CO-B day ( n ) $=\mathrm{CVB}(\mathrm{n})=\operatorname{CVB}(\mathrm{n}-1) *(1+\mathrm{PCB}(\mathrm{n})$ )

$$
\mathrm{CO}-\mathrm{C} \rightarrow \text { price change } \mathrm{CO}-B=P C C=F^{-1}(u)=\left\{\begin{array}{c}
-0.1 ; 0 \leq u \leq 0.05 \\
-0.05 ; 0.05<u \leq 0.2 \\
0 ; 0.2<u \leq 0.4 \\
0.03 ; 0.4<u \leq 0.7 \\
0.05 ; 0.7<u \leq 0.9 \\
0.08 ; 0.9<u \leq 1
\end{array}\right.
$$

Closing value CO-C day ( n ) $=\operatorname{CVC}(\mathrm{n})=\operatorname{CVC}(\mathrm{n}-1)^{*}(1+\mathrm{PCC}(\mathrm{n}))$

$$
\mathrm{PV}(\mathrm{n})=\mathrm{CVA}+\mathrm{CVB}+\mathrm{CVC}
$$

(b) Using the following $U(0,1)$ numbers, simulation for 10 days to evaluate the average value of the portfolio in 10 days. Use the following table to evaluate the average value of the portfolio after 10 days.

| Day | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |

| PV ( n ) | 190009.5 | 199509.975 | 215470.8 | 226244.3 | 244343.9 | 256561 | 277085.9 | 277085.9 | 249377.3 | 236908.5 |
| U3 | 0.996 | 0.959 | 0.237 | 0.669 | 0.382 | 0.594 | 0.845 | 0.583 | 0.629 | 0.806 |
| Percentage | 0.08 | 0.08 | 0 | 0.03 | 0 | 0.03 | 0.05 | 0.03 | 0.03 | 0.05 |
| $\mathrm{PV}(\mathrm{n})$ | 216075.6 | 233361.648 | 233361.6 | 240362.5 | 240362.5 | 247573.4 | 259952 | 267750.6 | 275783.1 | 289572.3 |
|  |  |  |  |  |  |  |  |  |  |  |
| Portfolio | 596085.1 | 622871.623 | 638832.4 | 656606.8 | 689906.4 | 715490.4 | 748394 | 756192.5 | 753424.9 | 754745.2 |
|  |  |  |  |  |  |  |  |  |  |  |
| Average |  | 693254.941 |  |  |  |  |  |  |  |  |

Note that the first line of $P V(n)$ is for CO-A, the second $P V(n)$ line is for CO-B and the third $P V(n)$ is for CO-C.

The value of the portfolio is the sum of PV(n) of CO-A, CO-B and CO-C. (for example, 190,000+190,009.5+216075.6) And take the summation of all portfolio and divide it by no. of days which is 10 and the answer is

693,255.941.
(c) Form a data table in Excel to simulate the daily value of the portfolio PV(n) for one year. Then compute the Average monthly $\operatorname{APV}(\mathrm{n})$ with $95 \%$ confidence interval and draw the empirical distribution of the $\mathrm{PV}(\mathrm{n})$ from the data table (fix your results in the data table). Put your results
in an Excel sheet and <Past> the screen shot of Excel Data Table for first 20 days with numbers and with cell functions ( $\mathrm{Ctrl}+\sim$ ).
(d) Now consider the case where the distribution for the daily change of each share is given as a continuous variable as in the table below. Also, the investor will maintain the equal value for each share as in the table. Using Excel simulation, build a data table for one month ( 30 day) what is the simulated value of the portfolio by the end of the month. Put your results in an Excel sheet and <Past> the screen shot of model simulation table for first 20 days with numbers and with cell functions (Ctrl + ~). Send the excel file with your answer sheet.

|  | Current Portfolio |  | Percentage of Daily Price Change is Normal distribution |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Total value | Price <br> Per Share | Mean $\boldsymbol{\mu}$ | Standard deviation $\boldsymbol{\sigma}$ |
| CO-A | 200,000 | 32 SR | $3 \%$ | $5 \%$ |
| CO-B | 200,010 | 15 SR | $6 \%$ | $10 \%$ |
| CO-C | 200,070 | 95 SR | $8 \%$ | $15 \%$ |

(e) Find the expected monthly value of the portfolio in part (d) for 100 months. Give the average monthly value and the $95 \%$ confidence interval. Put your results in an Excel sheet and <Past> the screen shot of model simulation table for first 20 days with numbers and with cell functions ( $\mathrm{Ctrl}+\sim$ ). Send the excel file with your answer sheet.

## Question \#2:

| Rubric: $\mathbf{2 8}$ Points |  |
| :--- | :--- |
| +3 Points-(3) | Attempt to write something on Inverse F(x) -- part (a) |
| +4 Points-(7) | writing The Correct and detailed Inverse F(X)-- part (a) |
| +4 Points-(11) | Attempt to do short simulation by hand-- part (b) |
| +3 Points-(14) | Writing the correct calculations for Simulation by hand-- part (b) |
| +4 Points-(18) | Attempt to do Inverse for f(N) by Excel-- part (c) |
| +2 Points-(20) | Writing the correct Inverse for f(N) by Excel-- part (c) |
| +4 Points-(24) | Attempt to do the Excel simulation -- part (d) |
| +4 Points-(28) | Complete and correct output of Excel-- Part (d) |
| Total |  |

Consider the CDF function for the random variable X:

$$
F(x)=\left\{\begin{array}{clr}
0 & ; & x<1 \\
\frac{(x-1)^{2}}{15} & ; 1 \leq x \leq 4 \\
1-\frac{(6-x)^{2}}{10} & ; 4<x \leq 6 \\
1 & ; & x>6
\end{array}\right.
$$

Answer the following:
(a) Derive an inverse transform algorithm for this distribution, and write the detailed algorithm for simulating from $\mathrm{F}(\mathrm{x})$.

(b) Let X be the time between arrival of buses in a given station (in minutes). Using the $\mathrm{U}[0,1$ ] random number in the following table, using the inverse transform in part (b) to determine the arrival time of the $1^{\text {st }}$ ten buses. (Use uniforms as needed)

## From U 1 if $0<\mathrm{U} 1<0.6$ we use $\mathrm{X}=1+\sqrt{15 u_{1}}$.

If $0.6<\mathrm{U} 1<1$ we use $\mathrm{X}=6-\sqrt{10\left(1-u_{1}\right)}$

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{U}_{1}[0,1]$ | 0.485 | 0.389 | 0.601 | 0.374 | 0.808 | 0.527 | 0.533 | 0.532 | 0.122 | 0.854 |
| $\mathrm{U}_{2}[0,1]$ | 0.328 | 0.708 | 0.027 | 0.653 | 0.283 | 0.113 | 0.662 | 0.701 | 0.169 | 0.283 |
| $\mathbf{X}$ | 3.697 | 3.415 | 4.002 | 3.369 | 4.617 | 3.812 | 3.828 | 3.825 | 2.352 | 4.793 |
| Arrival <br> Time of | 3.697 | 7.112 | 11.114 | 14.483 | 19.1 | 22.912 | 26.74 | 30.565 | 32.917 | 37.71 |

(c) Assume that all buses are of the same size with maximum of 20 seats. Let N be the number of passengers on board in each bus arrived. Where N is random variable Geometric distribution with minimum 5 and max 20 . Write the inverse function of the N , and write the detailed algorithm for simulating from $f(\mathrm{~N})$ :

$$
f(N=n)=(1-0.9)(0.9)^{n} \quad ; \quad n=0,1,2, \ldots
$$

$$
\begin{aligned}
& \text { 2C) } f(N=n)=(1-0 . a)(0 . a)^{n} ; \\
& g(n)=\frac{f(n)}{F(b)-F(a)} \quad a \leqslant x \leqslant b \\
& g(n)=\frac{f(n)}{F(20)-F(5)} \quad 5 \leqslant x \leqslant 20 \\
& G(n)=\frac{F(n)-F(5)}{F(20)-F(5)} \\
& F(20)=\mathbb{P}(N \leqslant 20)=0.89086 \\
& F(\$)=\mathbb{P}(N \leqslant 5)=0.468 \\
& G(n)=\frac{F(n)-0.468}{0.890-0.468} \\
& G(n)=\frac{1-(0.9)^{n+1}-0.468}{0.890-0.468}
\end{aligned}
$$

$$
G(n)=u
$$

$$
\frac{1-(0.9)^{n+1}-0.468}{0.890-0.468}=m
$$

$$
1-(0.9)^{n+1}-0.468=0.4224
$$

$$
(0.9)^{n+1}=0.532 \pi 0.4224
$$

$$
n+1=\frac{\ln (0.532-0.422 i)}{\ln (0 . a)}
$$

$$
n=\left[\frac{\ln (0.532 \text { F. } 0.422 u)}{\ln (0 . a)}\right]^{-1}=G^{-1}(u)
$$

d) Get $u \sim u_{[0,1]}$

Return $G^{-1}(u)$
(d) Using Excel, data table in Excel and your answers, run a simulation model for 1000 bus to estimate average number of passengers arrived to the bus station per hour with the $95 \%$ confidence interval (fix the results in Excel for the data table). Put your results in an Excel sheet and <Past> the screen shot of the model simulation table for first 20 days with numbers and with cell functions ( $\mathrm{Ctrl}+\sim$ ). Send the excel file with the answer sheet.

Average $=($ SUM(pass. Bus\#1:pass. Bus\#1000)/Bus\#1000 arrival Time)*60

|  | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ |

| Total |  |

Consider the following probability density function:

$$
f(x)= \begin{cases}0.5 x-1 & 2 \leq x \leq 4 \\ 0 & \text { otherwise }\end{cases}
$$

(a) Compute the CDF of the function $f(\mathrm{x})$.

(b) Using your answer in part (a), Derive an inverse transform algorithm for this distribution.

$$
\begin{aligned}
& F(x)=u \\
& 1+0.25 x^{2}-x=u \\
& 0.25 x^{2}-x+(1-u)=0 \\
& \text { By the quadratic formula } \\
& x=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a} \\
& x=\frac{I \pm \sqrt{1-4(0.25)(1-u)}}{2(0.25)} \\
& x=2 \pm 2 \sqrt{1-(1-u)} \Rightarrow x=2+2 \sqrt{u} \\
& x=2 \pm 2 \sqrt{u}
\end{aligned}
$$

(c) Let X be the time between calls to a call center. Using $\mathrm{U}[0,1]$ random number in the following table, use the inverse transform in part (b) to simulate the call arrival time of each customer.

| Call \# | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{U}[0,1]$ | 0.013 | 0.116 | 0.681 | 0.951 | 0.202 | 0.328 | 0.708 | 0.027 | 0.653 | 0.283 |
| $\mathbf{X}$ | $\mathbf{2 . 2 2 8}$ | $\mathbf{2 . 6 8 1}$ | $\mathbf{3 . 6 5 0}$ | $\mathbf{3 . 9 5 0}$ | $\mathbf{2 . 8 9 9}$ | $\mathbf{3 . 1 4 5}$ | $\mathbf{3 . 6 8 3}$ | $\mathbf{2 . 3 2 9}$ | $\mathbf{3 . 6 1 6}$ | $\mathbf{3 . 0 0 6}$ |
| Arrival <br> Time | $\mathbf{2 . 2 2 8}$ | $\mathbf{4 . 9 0 9}$ | $\mathbf{8 . 5 6 0}$ | $\mathbf{1 2 . 5 1}$ | $\mathbf{1 5 . 4 0 9}$ | $\mathbf{1 8 . 5 5 4}$ | $\mathbf{2 2 . 2 3 7}$ | $\mathbf{2 4 . 5 6 6}$ | $\mathbf{2 8 . 1 8 2}$ | $\mathbf{3 1 . 1 8 8}$ |

(d) Assume that the call center has one line. Simulate the call time spend on the line assuming that the call takes a random amount of time that follows the shifted $p d f$ :

$$
\begin{gathered}
f(x)=\frac{2}{x^{3}} \quad ; \quad x>1 \text { with shift parameter }=1 \text { min. } \\
\mathrm{F}(\mathrm{x})=\int_{1}^{x} \frac{2}{t^{3}} d t \rightarrow \mathrm{~F}(\mathrm{x})=1-\frac{1}{x^{2}} ; x>1 \\
\mathrm{~F}(\mathrm{x})=\mathrm{u}+\delta \\
1-\frac{1}{x^{2}}=u \rightarrow \mathrm{X}=\sqrt{\frac{1}{1-u}}+1
\end{gathered}
$$

| Call \# | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Accept $/$ <br> Lost | A | A | A | L | L | A | A | L | A | A |

(e) Estimate the percentage of calls answered from simulation output. Show all your answers on paper.

| Call\# | Arr Time | Call Time | Call Finish call answerd |  |
| ---: | ---: | ---: | ---: | ---: |
| 1 | 2.23 | 2.26 | 4.49 | 1 |
| 2 | 4.91 | 2.08 | 6.99 | 1 |
| 3 | 8.56 | 7.74 | 16.30 | 1 |
| 4 | 12.51 | 2.04 | 14.55 | 0 |
| 5 | 15.41 | 2.14 | 17.55 | 0 |
| 6 | 18.55 | 2.03 | 20.58 | 1 |
| 7 | 22.24 | 2.80 | 25.04 | 1 |
| 8 | 24.57 | 2.10 | 26.67 | 0 |
| 9 | 28.18 | 2.18 | 30.36 | 1 |
| 10 | 31.19 | 2.08 | 33.26 | 1 |
|  |  |  |  | 1 |
|  |  | percentage | 0.70 |  |

Call Finish(i) = Arrival time(i) + Call Time(i) ; i=1,2,...., 10
First call of course will be answered, and from $2^{\text {nd }}$ call till the 10th call we Used IF STATEMENT.
If the call finish before the coming arrival call then it will be answer, value $=1$
If the call finish after the coming arrival call then it will be lost, value $=0$
(i.e. IF(Call Finish(i)<Arrival Call(i+1),1,0)).

Hence, as we see from above the answered calls was 7 of the total which is 10

$$
P(\text { call answered })=\frac{\text { Call answered }}{\text { Total calls }}=0.70
$$

(f) Estimate average number of answered calls per hour from simulation output. Show all your answers on paper.
The average number is $\frac{\text { Answered call } * 60}{\text { Total Simulation time }}=\frac{7 * 60}{33.26}=\mathbf{1 2 . 6 3}$
(g) The management decided to buy a new line. Show that the new line will affect the Expected average number of answered calls using simulation in (c) and (d). Show all your answers.

$$
\frac{\text { Total calls } * 60}{\text { Total Simulation Time }}=\frac{10 * 60}{33.26}=\mathbf{1 8 . 0 4}
$$

(h) Assume that the call center has one line and takes only 20 calls per day. Build a five different date table using Excel with 100 days for each table and compute:
a. percentage of calls answered with confidence $95 \%$ interval.
b. number of answered calls per hour with confidence 95\% interval.

| measure | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- |
| Ave. percentage calls answered |  |  |  |  |
| Ave. number calls answered per hour |  |  |  |  |

Your results will be something like:

|  | measure | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Data <br> Table \#1 <br> outputs | Ave. percentage calls <br> answered |  |  |  |  |
|  | Ave. number calls <br> answered per hour |  |  |  |  |
| Data <br> Table \#2 <br> outputs | Ave. percentage calls <br> answered |  |  |  |  |
|  | Ave. number calls <br> answered per hour |  |  |  |  |
| Data <br> Table \#3 <br> outputs | Ave. percentage calls <br> answered | Ave. number calls <br> answered per hour |  |  |  |
| }{Table \#4 <br> outputs} | Ave. percentage calls <br> answered |  |  |  |  |
|  |  |  |  |  |  |
| Data <br> Table \#5 <br> outputs | Ave. percentage calls <br> answered | Ave. number calls <br> answered per hour |  |  |  |

Finally write the summary for all 5 data tables:

|  | Ave. | STD. | LL-95\% | UL-95\% |
| :--- | :--- | :--- | :--- | :--- |
| Ave. percentage calls answered from <br> all data tables |  |  |  |  |
| Ave. number calls answered per hour <br> from all data tables |  |  |  |  |

Send the excel file with your answers sheet

## Question \#4: Extra

## Rubric: 20 Points

| $\mathbf{+ 2}$ Points-(2) | part (a)--Attempt to write something on $\mathrm{X}(\mathrm{n})$ and $\mathrm{Y}(\mathrm{n})$ |

| $\mathbf{+ 1}$ Points-(3) | part (a)--writing The Correct and detailed $\mathrm{X}(\mathrm{n})$ and $\mathrm{Y}(\mathrm{n})$ |
| $\boldsymbol{+ 2}$ Points-(5) | part (b)--Attempt to write something on Define all parameters |
| $\mathbf{+ 1}$ Points-(6) | part (b)--writing The Correct and detailed Define all parameters |
| $\mathbf{+ 2}$ Points-(8) | part (c)--Attempt to write something on sim confirmed booking seats |

| $\mathbf{+ 1}$ Points-(9) | part (c)--writing The Correct and detailed sim confirmed booking seats |
| :--- | :--- |
| $\mathbf{+ 2}$ Points-(11) | Part (d) Attempting to compute average revenue per flight and the 95\% C.I. |
| $\mathbf{+ 2}$ Points-(13) | Part (d) Attempting to compute average number of actual passengers <br> boarded and 95\% C.I. |
| +2 Points-(15) | Part (d) Attempting to compute The empirical CDF of the revenue |
| $\mathbf{+ 2}$ Points-(17) | Part (d) Attempting to compute The empirical CDF for the actual passengers <br> traveled on the airplane |
| $\mathbf{+ 3}$ Points-(20) | Part (d) Correct and organized solutions |
| Total |  |

SimAir is a local airline company that runs small jet airplanes between some local cities. Each airplane can take a maximum of 100 passengers. Past data shows that, for any flight, the number of confirmed booking seats follows a shifted binomial distribution with shift 60 and mean 30 . In addition, the number of confirmed booking passengers may miss the flight for some reason and do not show at the time of departure. The number of "no-show" passengers is a random integer that range between zero and $20 \%$ of the confirmed bookings. For every confirmed booking SimAir charge 750 SR. If the passenger did not show up he for his flight, he gets $50 \%$ refund. Also, any unbooked empty seat cost SimAir 250 SR.
(a) Write the total revenue for SimAir from flight ( n ) given the variables defined as follows:

- $X(n)$ : be the number of confirmed booking seats
- $Y(n)$ : be the number of no-show passengers.
(b) Define all parameters needed for simulation in Excel in the following cells location:

|  | A | B | C | D |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ |  |  |  |  |
| $\mathbf{2}$ |  |  |  |  |
| $\mathbf{3}$ |  |  |  |  |
| $\mathbf{4}$ |  |  |  |  |
| $\mathbf{5}$ |  |  |  |  |
| $\mathbf{6}$ |  |  |  |  |

You can use screen shot from Excel for the same cells.
(c) Using the parameters you write in part (a), write in the following cell the Excel function that you will use to simulate number of confirmed booking seats. Your answered will be corrected based the cell location you used in (a).

|  |  |
| :--- | :--- |
| $\mathbf{1 0}$ | A |

(d) Using the parameters you write in part (a), write in the following cell the Excel function that you will use to simulate number of no-show passengers. Your answered will be corrected based the cell location you used in (a).

|  | B |
| :--- | :--- |
| $\mathbf{1 0}$ |  |

(e) Using data table in Excel and your answers, run a simulation model for 1000 flight to provide the following outputs (fix the result of data table in Excel):

- The average revenue per flight and the $95 \%$ confidence interval
- The average number of actual passengers boarded the airplane with the $95 \%$ confidence interval
- The empirical CDF of the revenue
- The empirical CDF for the actual passengers traveled on the airplane.
