

Syllabus CHEM330

No	List of Topics	Contact Hours
1.	1. Generalities 1.1 Definition and Classification of Polymers 1.2 Natural polymers 1.3 Synthetic polymers	2
	2. Determination of structure and microstructure 2.1 Chemical structure and microstructure <i>2.1.1 Naming the polymers and copolymers</i> <i>2.1.1 Definition of the polymer structures</i> <i>2.1.2 Definition of the polymer microstructure (tacticity, cis, trans, etc)</i> <i>2.2 Polymer crystalline and polymer amorphous</i>	3
2	3. Polymerization and copolymerization of monomers 3.1 Properties of polyaddition reaction <i>3.1.1 Free Radical Polymerization</i> <i>3.1.2 Controlled radical polymerization (CRP)</i> <i>3.1-3 Anionic polymerization</i> <i>3.1.4 Cationic polymerization</i> <i>3.1.5 Coordination polymerizations</i> 3.2 Properties of free radical copolymerization reaction <i>3.2.1 Alternative Copolymer</i> <i>3.2.2 Random copolymers</i> <i>3.2.3 Block copolymers</i> <i>3.2.4 Grafting copolymers</i>	5
	MED term 1	2
4	4. Techniques used to Determine the average molecular weight 4.1 Notion of molecular mass in the polymers (statistical calculation) 4.2 Experimental methods used to determine the molecular mass of polymers <i>4.2.1 Viscosimetry</i> <i>4.2-2 Osmometry</i> <i>4.2.3 Terminal group evaluation</i> <i>4.2.3 Size exclusion Chromatography</i>	5

	<i>4.2.4 Light scattering</i>	
	5. Thermal properties of polymers	5
	5.1 DSC technique and the transition, melting and crystallization principles 5.2 TGA technique and degradation, depolymerization and thermal stability notions	
	2 MED term	2
	Revision	
	Terminal exam	3
	Total	27
