Project Instruction:

- **Work in a group of two OR individual.**

- **You are asked to submit a file containing the full code + screenshots of the run.**

- **The submission deadline is 17 Nov. 2018 until 12:00 midnight, No submission will be allowed after that.**

Project Description:

Imagine that you are asked to develop an E-Recruitment System. E-Recruitment System is a program to help a company in registering their new employee's information and keeps them in a database, also, generating reports. Use Microsoft Visual Studio to develop a Visual Basic project that has a form similar to this.

Your program should do the following as minimum requirements:

- **Read all information from the Register using a form with Register button.**

- **Save all data in a table called NewEmpInfo in your Database, the table description as below:**

Table Name: NewEmpInfo		
Column name	**Data Type**	**Size**
Emp_name	Varchar2	15
Manager_name	Varchar2	15
Gender	Character	1
Age	Number	2
Phone_number	Number	10

- **Generating a report each time the Regestier aske for it, where it will be in the desktop and it should containing the names of all employee whos names start with 'A'.**

Good Luck
