

## BCH 471

### Answer

**Q1- Calculate the total RBC number manually in one of the 5 large squares, knowing that 86, 80, 55, and 96 cells are found in the rest of the large squares:**

The sum of RBC in 5 large square =  $86+80+55+96+81=398$  cells

The average of RBC in one square =  $398/80=5$  cells

RBC count =  $5 \times 200 \times 4000=4$  million cells\mm<sup>3</sup>

**Q2- Calculate the total WBC number manually in all 4 squares:**

The sum of WBC in 4 large square =  $32+41+40+40=153$  cells

The average of WBC in one square =  $153/64=2.4$  cells

WBC count =  $2.4 \times 20 \times 160=7550$  cells\mm<sup>3</sup>
