Student A Handout: Spot the difference!

Work in pairs. You are trying to find 6 differences between two pictures.

Follow the instructions below.

1. Student A: You have one picture. Student B: you have another picture. Do NOT show your picture to your partner! There are TEN differences between the pictures.
2. Look carefully at your picture. Think of how you can describe it to your partner.
3. Student A: describe one thing about your picture and then ask your partner a question about his picture. E.g., There's one tree on a hill in my picture. Are there any trees in your picture?
4. Student B: Answer Student A's question and add some more information about your own picture. E.g., No, there aren't any trees in my picture, but there's a big house on the left. Have you got that?
5. Write down any differences you find or mark them on the picture. E.g., I've got a tree and you haven't, so that's one difference. The winner is the pair who can find all ten differences first.
