

Lab. 3: Media Preparation.

Amal Alghamdi, M.Sc. MMV.
ahamdan1@ksu.edu.sa

Microorganisms need food to grow

- ◆ Primary ingredients required by all living organisms include:
 - a carbon source, water, minerals, and a nitrogen source.
- ◆ These nutrients together make a **media**.
- ◆ Different microbes need different amounts of these nutrients.

Culture media may be found in one of three states

- ◆ **Broth (liquid).**
- ◆ **Semi-solid.**
- ◆ **Solid.**

Aim

- To prepare the solid and broth media which contain the water and nutrients required for the growth of both bacteria and fungi.

Material

1- Different Media:

- Nutrient Agar (NA).
- Nutrient Broth (NB).
- Potato Dextrose Agar (PDA).

2- Glassware:

(Test tubes, flasks).

3- Disposable petri plates.

4- Scale.

- ## 5- Distilled water
- ## 6- Bunsen burners
- ## 7- Autoclave

Procedure

1 • Weigh

2 • Dissolve

3 • Sterilize

4 • Pour

5 • Cool until use

Different shapes of Media

**How could
you prepare
those types
of Media?**

A-Pouring of Solid Media: In petri plates:

1. Write date and time on the bottom of plates.
2. Remove the lid slightly.
3. Pour the media near Bunsen burner.
4. When solidify, invert the plate and store at 4°C.

B- Pouring of Solid Media: In tubes:

For Agar media:

Slant Agar and / or Deep (Stab) Agar:

- ◆ Write labels on tubes
- ◆ After dissolving, pour media in test tubes .
- ◆ Autoclave with loose caps.
- ◆ Place in **slant** or **vertical** position till the media solidifies.

Slant agar

Fill 1/3 tube

Deep agar

Fill 2/3 tube

2- Pouring of Solid Media: In tubes:

For broth media:

- ◆ Place the test tube near a burner and remove the cap.
- ◆ Pour the media in the tube and close the cap at once then autoclave.
- ◆ Place the tube in upright position in the test tube stand.

Thanks for listening!
