

Math 218: Differential Calculus 4(4,0,2)

Textbooks: Textbook 1: Precalculus, Mathematics for Calculus

J. Stewart, L. Redlin and S. Watson

Cengage Learning, 7th edition, 2015

Textbook 2: Early Transcendentals

J. Stewart

Cengage Learning, 8th edition, 2015

Chapter 1, Textbook 1:

1.1: Properties of real numbers, Example 1, properties of negatives, Example 2, properties of fractions, Example 3, the real lines, sets, Example 4, intervals, Example 5, Example 6, absolute value, Example 7, properties of absolute values, distance between points, Example 8

1.2: Example 1, Example 2, laws of exponents, Example 3, Example 4, Example 5, definition and properties of n th roots, Example 9, Example 10, rational exponents, Example 11, Example 12, Example 13, Example 14

1.3: Definition of polynomials, Example 1, Example 2, Example 3, product formulas, Example 4, Example 5, Example 6, Example 7, Example 9, special factoring formulas, Example 10, Example 11, Example 12, Example 13, Example 15

1.4: Example 1, Example 2, Example 3, Example 4, Example 5, Example 6, Example 8, Example 9

1.5: Example 1, Example 4, Example 5, Example 6, Example 7, Example 8, Example 10, Example 12, Example 13, Example 14

1.6: Definition of a complex number, Example 1, operations, conjugate, Example 2, Example 3, Example 4, Example 5, Example 6, Example 7

1.8: Rules for inequalities, Example 1, Example 2, Example 3, Example 4, Example 5, properties of absolute value inequalities, Example 6, Example 7

1.9: The coordinate plane, Example 1, distance between two points, Example 2, midpoint of a segment, Example 3, Example 4, Example 8, equation of a circle, Example 9, Example 10, Example 11

1.10: Everything until Example 9 (included)

Chapter 2, Textbook 1:

2.1: Definition of a function, Example 2, Example 3, Example 4, Example 5, the domain of a function, Example 7

2.5: Definition of a linear function, Example 1, Example 2, slope and rate of change, Example 3, Example 4

Chapter 3, Textbook 1:

3.1: Definition and standard form of a quadratic function, Example 1, maximum and minimum, Example 2, Example 3, Example 4, Example 5

3.3: Division algorithm, Example 1, Example 2, the remainder theorem, Example 4, the factor theorem, Example 5, Example 6

3.4: The rational zeros theorem, Example 1, Example 2

3.5: The fundamental theorem of algebra, complete factorization theorem, Example 1, Example 2, Example 3, Example 4, conjugate zeros theorem, Example 6

Chapter 4, Textbook 1:

4.1: Definition of exponential function, Example 1, Example 2, Example 3, Example 6

4.2: Definition of the natural exponential function, Example 2 (a), Example 3 (a, b)

4.3: Definition of the logarithmic function, Example 2, properties of logarithms, Example 3, Example 4, definition of common logarithm, the natural logarithm and its properties, Example 9, Example 10

4.4: Laws of logarithms, Example 1, Example 2, change of base formula, Example 5

4.5: Example 1, Example 2, Example 4, Example 5, Example 7, Example 8, Example 10

4.7: Example 2, Example 5

Chapter 5, Textbook 1:

5.2: Definitions of trigonometric functions, Example 1, special values of trigonometric functions, Example 2, even-odd properties, Example 4, fundamental identities, Example 5

5.3: Quick presentation of the graphs of $\sin(x)$, $\cos(x)$, $\tan(x)$, $\cot(x)$

5.5: Definitions of inverse sine, inverse cosine, Example 1, Example 3, Example 4, Example 5, quick presentation for the graphs of inverse trigonometric functions

Chapter 6, Textbook 1:

6.3: Fundamental identities (pag 496), Example 5, Example 6

Chapter 7, Textbook 1:

7.1: Example 1, Example 2, Example 3(a), Example 4, Example 6, Example 7

7.2: Addition and subtraction formulas, Example 1, Example 2, Example 3, Example 4, Example 6

7.4: Example 1, Example 2, Example 3, Example 5, Example 6, Example 7

Chapter 8, Textbook 1:

8.1: Polar coordinates, Example 1, Example 2, relationship between polar and rectangular coordinates, Example 3, Example 4, Example 5, Example 6

8.2: Example 1, Example 2, Example 3, Example 4, Example 5

8.3: Example 1, modulus of a complex number, Example 3, Example 4, polar form of complex numbers, Example 5, multiplication and division of complex numbers, Example 6, de Moivre's theorem, Example 7, nth roots of complex numbers, Example 9

Chapter 9, Textbook 1:

9.4: Vectors in space, Example 1, magnitude of a vector, Example 2, Example 3, Example 4, definition of the dot product, Example 5, the angle between two vectors, Example 6

9.5: Definition of the cross product, Example 1, the cross product theorem, Example 3, the length of the cross product, area of a parallelogram, Example 4

Chapter 10, Textbook 1:

10.3: Definition of a matrix, augmented matrix of a linear system, Example 1, elementary row operations, Gaussian elimination, Example 3, Gauss-Jordan elimination, Example 4

10.6: Determinant of a 2x2 matrix, Example 1, determinant of a 3x3 matrix, Example 2, Example 3, Cramer's rule for systems in two and three variables, Example 6, Example 7

Chapter 2, Textbook 2:

2.3: Limit laws (1→11, pag 95-96-97), Example 2, direct substitution property, Example 3, Example 4, Example 5, Example 6, Theorem 1, Example 7, Example 8, Theorem 2, Theorem 3, Example 11

2.5: Definition of a continuous function, Example 1, Example 2 (a, b, c), Definition 2, Definition 3, Example 4, Theorem 4, Theorem 5, Example 6, Example 7, Theorem 8, Example 8, Theorem 9, Example 9, Theorem 10, Example 10

2.6: Quick explanation for vertical and horizontal asymptotes, Theorem 5, Example 3, Example 4, Example 5, Example 7, Example 8, Example 9, Example 10, Example 11

2.7: Definition 1, Example 1, Remark 2, Example 2, Definition 4, Example 4, Example 5

Chapter 3, Textbook 2:

3.1: Derivative of a constant, power rule, Example 1, Example 2, Example 3, Example 4, Example 5, derivative of natural exponential function, Example 8 (only the derivatives), Example 9

3.2: The product rule, Example 1(a), Example 2, the quotient rule, Example 4

3.3: Table of derivatives (pag 193), Example 1, Example 2

3.4: The chain rule, Example 1, Example 3, Example 4, Example 5, Example 6, Example 7, the derivative of b^x

3.6: Derivative of logarithm, Example 1, Example 2, Example 3, Example 4

3.11: Definitions of hyperbolic functions, Example 1, derivatives of hyperbolic functions, Example 2

Chapter 4, Textbook 2:

4.1: Definition 1, definition 2, Example 1, Example 2, Example 3, Example 4, the extreme value theorem, Fermat's theorem, Example 5, Definition 6, Example 7, Theorem 7, Example 8

4.2: Rolle's theorem, Example 2, the mean value theorem, Example 3, Example 5, Theorem 5, Corollary 7, Example 6

4.3: Increasing/decreasing test, Example 1, the first derivative test, Example 2, Example 3, the concavity test, inflection point, Example 5, the second derivative test, Example 6, Example 8

4.4: L'Hopital's rule, Example 1, Example 2, Example 3, Example 4, Example 5, Example 6, Example 7, Example 8

4.5: Guidelines for sketching a graph, Example 1, Example 3, Example 6
