perglycaemia.

PSYCHOBIOLOGY OF MARITAL & SEXUAL RELATIONSHIP ; AN ISLAMIC PERSPECTIVE.

Dr. Mohammad Al-Buckley

The Holy Quran' frequently stressed marriage and marital relationship e.g « He who created you from a single » « psych » (person) and out of it, its mate, in order that he might dwell in her. Al A'araf 189. in order to diagnose sexual dysfunctions and treat them, it is essential to understand the nature, functions and factors affecting normal sexual relationship. These variables have been explicitly explained in the holy Quoran' and Sunna (the prophet's sayings) The paper discusses the functions of sexual intercourse in Islamic literature, the clinical picture and impact of its dysfunctions, sexual development maturity and adequate performance as well as teachings on frequency, fore play, techniques, preparation and consent and duress. The newly found and accepted medical findings in this field adds nothing but confirmation of islamic teachings on the subject. The impact of this on treatment methods is briefly discussed .

Intelligence & family size : The supposed decline in Intelligence

Dr. Abdulrahman Al—frayh

It has been known for sometime that there appears to be a negative correlation between intelligence and fertility. The evidence is mainly of two kinds : Children in large families are on the average less intelligent . And as one goes up the social scale from unskilled labourers to the professional classes, the number of children per family also decreases. Since there is also evidence that intelligence is to a large extent inherited, geneticists have frequently predicted that the average intelligence of the population must be declining rapidly .
