3 L'Hopital's Rule

Ibraheem Alolyan Real Analysis

э

Derivative

Definition

Let $f: I \to \mathbb{R}$ (where I is an interval) and $c \in I$ then if the limit

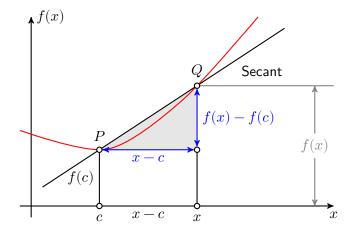

$$\lim_{x \to c} \frac{f(x) - f(c)}{x - c}$$

exists, it is called the derivative of f at c.

$$f'(c) = \lim_{x \to c} \frac{f(x) - f(c)}{x - c}$$

Image: A mathematical states and a mathem

∍⊳

Derivative

Mean Value Theorem L'Hopital's Rule Taylor's Theorem

Derivative

Examples

$$\bullet \ f(x) = k$$

$${\it 2} \ f(x)=x^n, n\in \mathbb{N}$$

3
$$f(x) = |x|$$

If f is defined on I = [a, b] then the derivatives at a, b are

$$f'(a) = \lim_{x \to a^+} \frac{f(x) - f(a)}{x - a}$$
$$f'(b) = \lim_{x \to b^-} \frac{f(x) - f(b)}{x - b}$$

If
$$f:(a,b) \to \mathbb{R}$$
 is differentiable then

$$f'(x) = \lim_{h \to 0} \frac{f(x+h) - f(x)}{h}$$

Derivative

Mean Value Theorem L'Hopital's Rule Taylor's Theorem

Derivative

Examples

$$f(x) = \sin x$$

Derivative Mean Value Theorem L'Hopital's Rule

Derivative

Theorem

If the function $f:I\longrightarrow \mathbb{R}$ is differentiable at $c\in I$, then it is continuous at c.

æ

Derivative

Theorem

If the functions $f,g:I\to \mathbb{R}$ are differentiable at $c\in I$, then

•
$$f + g$$
 is differentiable at c and

$$(g+f)'(c) = g'(c) + f'(c)$$

 $\ensuremath{ @ \ } fg \ensuremath{ \ } sdifferentiable \ensuremath{ at \ } c \ensuremath{ \ } and \ensuremath{ \ } and \ensuremath{ \ } c \ensuremath{ \ } and \ensuremath{ \ } c \ensuremath{ \ } and \ensuremath{ \ } c \ensuremath{ \ } and \ensu$

$$(fg)'(c) = f(c)g'(c) + f'(c)g(c)$$

3 If $g(c) \neq 0$ then $\frac{f}{q}$ is differentiable at c and

$$\left(\frac{f}{g}\right)\,{}'(c)=\frac{f\,{}'(c)g(c)-f(c)g\,{}'(c)}{g(c)^2}$$

(日)

If the function $f:I\longrightarrow \mathbb{R}$ is differentiable at $c\in I$ then 3 $f^{\,2}$ is differentiable at c and

$$(f^2)'(c) = 2f(c)f'(c)$$

2) f^n is differentiable at c and

$$(f^{n})'(c) = nf^{n-1}(c)f'(c)$$

(日)

Derivative

Examples

1 The function
$$f : \mathbb{R} \to \mathbb{R}$$

$$f(x)=x^3$$

is
$$1-1$$
 and differentiable, find

 $(f^{-1})'(8)$

 $f(x) = \sin(x)$

イロト イボト イヨト イヨト

æ

is 1-1 and differentiable, find $(f^{-1})\,{}^\prime(x)$

Local Extrema

Definition

The function $f:D\to\mathbb{R}$ has a local maximum at $c\in D$ if there is a neighborhood $U=(c-\delta,c+\delta)$ such that

$$f(x) \leq f(c) \qquad \forall x \in U \cap D$$

and it has a local minimum at $c\in D$ if there is a neighborhood $U=(c-\delta,c+\delta)$ such that

$$f(x) \ge f(c) \qquad \forall x \in U \cap D$$

▲ 同 ▶ ▲ 王

Extremum

Theorem

If f has an extremum on $\left(a,b\right)$ at c and if f is differentiable at c then

$$f^{\,\prime}(c)=0$$

æ

∃ >

Image: A mathematical states and a mathem

Critical Point

Definition

- \boldsymbol{c} is a critical point of \boldsymbol{f} if
 - $\textbf{0} \quad f \text{ is not differentiable at } c$

2 or
$$f'(c) = 0$$

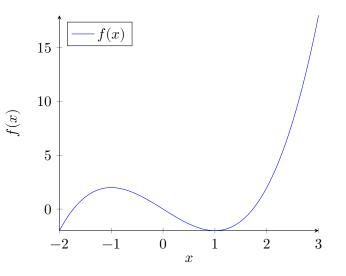

If the function $f:(a,b)\to \mathbb{R}$ has a local extremem at c then c is a critical point of f

Extremum

Examples

$$f: [-2,3] \to \mathbb{R}$$

$$f(x) = x^3 - 3x$$

Rolle's Theorem

Theorem

If $f:[a,b]\to\mathbb{R}$ is continuous on [a,b], differentiable on (a,b) and f(a)=f(b) then there is $c\in(a,b)$ such that

$$f'(c) = 0$$

First derivative test

Theorem

2

If $f:D\to\mathbb{R}$ is continuous and c is a critical point of f and there is an open interval $U\subset D$ which contains c such that

 $\begin{array}{ll} f'(x) < 0 & \quad \forall x \in U, x < c \\ f'(x) > 0 & \quad \forall x \in U, x > c \end{array}$

then $f(\boldsymbol{c})$ is a local minimum for f

 $f'(x) > 0 \qquad \forall x \in U, x < c$

 $f^{\,\prime}(x) < 0 \qquad \forall x \in U, x > c$

then $f(\boldsymbol{c})$ is a local maximum for f

First derivative test

Theorem - continued

 $\begin{tabular}{ll} \bullet f'(x) \mbox{ has the same sign on } x \in U-\{c\} \mbox{ then } f(c) \mbox{ is not a local extremum of } f \end{tabular}$

3)) B

Darboux

Theorem

If $f:I=[a,b]\to \mathbb{R}$ is differentiable and λ is between $f^{\,\prime}(a)$ and $f^{\,\prime}(b),$ i.e.,

$$f^{\,\prime}(a) < \lambda < f^{\,\prime}(b) \qquad or \qquad f^{\,\prime}(b) < \lambda < f^{\,\prime}(a)$$

then there is $c \in (a, b)$ such that

$$f'(c) = \lambda$$
