# Sequences and Convergence

#### Definition

A sequence is a function whose domain is  $\mathbb{N}$ .

$$x:\mathbb{N}\to\mathbb{R}$$

$$x(n) = x_n$$

$$\begin{array}{c} (x_1,x_2,x_3,\ldots) \\ (x_n)_{n=1}^\infty \\ (x_n) \end{array}$$

 $\{x_n:n\in\mathbb{N}\}$  is the range of the sequence.

Image: A mathematical states and a mathem

# Examples

$$(2) = (2, 2, 2, ...)$$

2 
$$(2n) = (2, 4, 6, ...)$$

 $\label{eq:constraint} \begin{array}{l} \bullet \\ ((-1)^n) = (-1,1,-1,\ldots) \mbox{ is a sequence whose range is } \\ \{-1,1\} \end{array}$ 

• 
$$(\frac{1}{n}) = (1, \frac{1}{2}, \frac{1}{3}, ...)$$

The sequence can be defined by induction

$$a_1=1, \quad a_{n+1}=a_n+\frac{1}{n}, \quad n\in \mathbb{N}$$

# Convergence

#### Definition

The sequence  $(x_n)$  is said to be convergent if there is  $x\in \mathbb{R}$  such that

$$\begin{aligned} \forall \varepsilon > 0 \ \ \exists N \in \mathbb{N}: \\ |x_n - x| < \varepsilon \qquad \forall n \geq N \end{aligned}$$

and we write

$$\lim_{n \to \infty} x_n = x$$
$$\lim_{n \to \infty} x_n = x$$
$$x_n \to x$$

#### Sequences and Convergence

Properties of convergence sequences Monotonic Sequences Cauchy Criterion Subsequences Open and Closed Sets

### Examples

 $\lim \frac{1}{n} = 0$ 

.

# Neighborhood

#### Definition

If  $a\in\mathbb{R}$  then  $V\subset\mathbb{R}$  is called a neighboorhood of a if there is  $\varepsilon>0$  such that

 $(a-\varepsilon,a+\varepsilon)\subset V$ 

(日)

э

# Remarks

 $\bullet~$  If we found  $N\in\mathbb{N}$  such that

$$|x_n - x| < \varepsilon \qquad \forall \ n \ge N$$

then any number greater than  ${\cal N}$  will satisfy the condition.

• If we change  $\varepsilon$  we might need to change N.

・ロト ・ 同ト ・ ヨト ・

포 🛌 포

# Remarks

• If  $(x_n)$  satisfies for all  $\varepsilon>0$  there exists  $N\in\mathbb{N}$  and a constant C>0 such that

$$|x_n - x| < C\varepsilon \qquad \forall \ n \ge N$$

then  $x_n \to x$ .

# Uniquness

### Theorem

If the sequence  $(x_n)$  is convergent then its limit is unique.

• □ ▶ • < </p>
• □ ▶ • < </p>

# Bounded sequences

#### Definition

A sequence  $(x_n)$  is bounded if there is a K > 0 such that

$$|x_n| \le K \qquad \forall n \in \mathbb{N}$$

#### Theorem

If a sequence is convergent then it is bounded.

The converse is not true.

# Algebraic operations on sequences

#### Theorem

.

If  $x_n \to x \neq 0$  then there exists M > 0 and  $N \in \mathbb{N}$  such that

 $|x_n| > M \qquad \forall n \geq N$ 

イロト イポト イヨト イヨト

э

## Algebraic operations on sequences

#### Theorem

If  $\left( x_{n}\right)$  converges to x and  $\left( y_{n}\right)$  converges to y then

$$\label{eq:converges} \mathbf{0} \ (x_n+y_n) \text{ converges to } x+y.$$

2 
$$(x_n y_n)$$
 converges to  $xy$ .

3 If 
$$y_n \neq 0$$
 for all  $n \in \mathbb{N}$  and  $y \neq 0$  then  $(\frac{x_n}{y_n})$  converges to  $\frac{x}{y}$ .

< (17) > <

э

# **Convergent Sequences**

#### Theorem

If  $x_n \to x \text{ and } y_n \to y \text{ and If}$ 

$$x_n \le y_n \quad \forall n \in \mathbb{N}$$

then  $x \leq y$ 

э

∃ >

(日)

# Squeeze Theorem

### Theorem

lf

$$x_n \le y_n \le z_n \quad \forall n \ge N_0$$

and  $\lim x_n = \lim z_n = l$  then  $(y_n)$  converges to l

æ

< ロ > < 同 > < 回 > < 回 > < 回 > <

#### **Binomial Theorem**

$$(x+y)^n = \sum_{k=0}^n {n \choose k} x^{n-k} y^k$$

## Monotonic sequences

### Definition

- A sequence  $\left( x_{n}\right)$  is
  - increasing if

$$x_{n+1} \ge x_n \quad \forall n \in \mathbb{N}$$

strictly increasing if

$$x_{n+1} > x_n \quad \forall n \in \mathbb{N}$$

< 4 → < <

## Monotonic sequences

### Definition

A sequence  $\left( x_{n}\right)$  is

decreasing if

$$x_{n+1} \leq x_n \quad \forall n \in \mathbb{N}$$

estrictly decreasing if

$$x_{n+1} < x_n \quad \forall n \in \mathbb{N}$$

if a sequence is increasing or decreasing, it is called monotonic sequence.

Note:  $(x_n)$  is increasing iff  $(-x_n)$  is decreasing

・ロン ・回 と ・ ヨ と ・ ヨ と …

## Monotonic Sequences

#### Theorem

A monotonic sequence is convergent iff it is bounded.

**(**) if  $(x_n)$  is increasing and bounded then

$$\lim x_n = \sup \left\{ x_n : n \in \mathbb{N} \right\}$$

**2** If  $(x_n)$  is decreasing and bounded then

$$\lim x_n = \inf \left\{ x_n : n \in \mathbb{N} \right\}$$

#### Examples

.

Prove that  $x_1 = 1, \ x_{n+1} = \sqrt{2x_n}$  is convergent then find its limit

・ロン ・回 と ・ ヨ と ・ ヨ と …

# Extended Real Number System

## $\bar{\mathbb{R}}=\mathbb{R}\bigcup\{-\infty,\infty\}=[-\infty,\infty]$

Ibraheem Alolyan Real Analysis

# Cauchy sequence

### Definition

A sequence  $(x_n)$  is called a Cauchy sequence if

$$\begin{aligned} \forall \varepsilon > 0 \ \ \exists N \in \mathbb{N}: \\ |x_n - x_m| < \varepsilon \qquad \forall n, m \geq N \end{aligned}$$

• □ ▶ • < </p>
• □ ▶ • < </p>

# Cauchy criterion

#### Theorem

### A sequence $\left( x_{n}\right)$ is convergent iff it is a Cauchy sequence

Ibraheem Alolyan Real Analysis

• □ ▶ • < </p>
• □ ▶ • < </p>

# **Cluster** Point

#### Definition

A point x ∈ R is called a cluster (an accumulation) point of A ⊂ R if every neighborhood V of x contains an element in A different than x.

The set of all cluster point is  $\widehat{A}$ .

A point in A which is not a cluster point of A is an isolated point of A.

# **Cluster** Point

### Examples

- **1** {1, 2, 3}
- **2** Z
- **3** [0, 1)

$$\textcircled{}{} \{\frac{1}{n}: n \in \mathbb{N}\}$$

Ibraheem Alolyan Real Analysis

# Bolzano - Weierstrass

#### Theorem

Every infinite and bounded subset of  $\mathbb R$  has at least one cluster point in  $\mathbb R.$ 

Ibraheem Alolyan Real Analysis

# Cauchy sequences

#### Examples

• Show that

$$x_n = \frac{2n}{3n+1}$$

is a Cauchy sequence

æ

• □ ▶ • □ ▶ • □ ▶

# Cauchy sequences

### Examples

.

$$\bullet~\mbox{If}~x_1=1, x_2=2$$
 ,

$$x_n = \frac{1}{2}(x_{n-1} + x_{n-2}), \quad n = 3, 4, \dots$$

Prove that  $(x_n)$  is convergent.

æ

イロト イヨト イヨト イヨト

# Subsequence

#### Definition

If  $\left(x_{n}\right)$  is a sequence, and  $\left(n_{k}\right)$  is strictly increasing sequence of natural numbers

$$n_1 < n_2 < n_3 < \ldots$$

then the sequence

$$(x_{n_k})=(x_{n_1},x_{n_2},\ldots)$$

is a subsequence of  $(x_n)$ 

• □ ▶ • < </p>
• □ ▶ • < </p>

# Subsequences

### Examples

$$\bullet \ (x_4, x_5, x_6, \ldots)$$

**2** 
$$(x_1, x_3, x_5, ...)$$

• Is 
$$(\frac{1}{2}, 1, \frac{1}{5}, ...)$$
 a subsequence of  $(\frac{1}{n})$ 

• Is 
$$(4, 8, 9, ...)$$
 a subsequence of  $(2n)$ 

**9** 
$$(rac{1}{k^2})$$
 is a subsequence of  $(rac{1}{n})$ 

# Subsequence

#### Theorem

If  $\left(x_{n}\right)$  converges to x, then every subsequence of  $\left(x_{n}\right)$  converges to x

# Subsequence

#### Theorem

If  $\left(x_{n}\right)$  converges to x, then every subsequence of  $\left(x_{n}\right)$  converges to x

#### Theorem

If  $(\boldsymbol{x}_n)$  is convergent and has a subsequence that converges to  $\boldsymbol{x}$  , then  $(\boldsymbol{x}_n)$  converges to  $\boldsymbol{x}$ 

Image: A math a math

∃ > \_

# Subsequence

#### Theorem

If  $(\boldsymbol{x}_n)$  converges to  $\boldsymbol{x},$  then every subsequence of  $(\boldsymbol{x}_n)$  converges to  $\boldsymbol{x}$ 

#### Theorem

If  $(\boldsymbol{x}_n)$  is convergent and has a subsequence that converges to  $\boldsymbol{x},$  then  $(\boldsymbol{x}_n)$  converges to  $\boldsymbol{x}$ 

#### Theorem: Bolzano-Weierstrass

Every bounded sequence has a convergent subsequence.

• □ ▶ • < </p>
• □ ▶ • < </p>

### Definition

A set  $A\subset\mathbb{R}$  is open if for all  $x\in A$  there is  $\varepsilon>0$  such that  $(x-\varepsilon,x+\varepsilon)\subset A$ 

Ibraheem Alolyan Real Analysis

< □ > < 同 > < 回 >

### Examples

- $\textcircled{\ } \mathbb{R} \backslash \{y\} \text{ where } y \in \mathbb{R}$

Exercises (Convergent sequences)

- Use the definition to show that •  $\lim \frac{2n-1}{3n+2} = \frac{2}{3}$ 
  - $\lim \frac{n^3 + 1}{2n^3 + n} = \frac{1}{2}$
- $\ensuremath{ @ \textbf{ Prove that } \lim x_n = 0 $ if and only if \lim |x_n| = 0 $ } \label{eq:prove that } \ensuremath{ \| x_n \| = 0 $ } \en$
- (a) If the two sequences  $(x_n)$  and  $(y_n)$  converge to c, and we define the shuffled sequence  $(z_n)$  by

$$(z_1,z_2,z_3,z_4,\dots)=(x_1,y_1,x_2,y_2,\dots)$$

show that the sequence  $(z_n)$  also converges to c

# Exercises (Convergent sequences)

- $\textcircled{0} Give an example of two sequences $(x_n)$ and $(y_n)$ such that $(x_n+y_n)$ is convergent and $(x_n)$ is divergent.}$
- If the sequences  $(x_n)$  and  $(x_n + y_n)$  are both convergent, prove that  $(y_n)$  is also convergent and determine its limit. Can you state a corresponding result for the sequence  $(x_n \cdot y_n)$ ?
- $\textcircled{\sc 0}$  Give an example of a divergent sequence  $(x_n)$  such that  $(|x_n|)$  is convergent.

When does the convergence of  $\left(|x_n|\right)$  imply the convergence of  $\left(x_n\right)$ ,

and what is the relation between  $\lim |x_n|$  and  $\lim x_n$  when both exist?

• If 
$$\lim \frac{x_n - 1}{x_n + 1} = 0$$
, prove that  $\lim x_n = 1$ 

Exercises (Monotonic sequences)

**9** Prove that 
$$x_n = \frac{n^n}{n!}$$
 is monotonic

Prove that each of the following sequences is monotonic and bounded, then find its limit

$$\begin{array}{ll} \bullet & x_1 = 1, \ x_{n+1} = \sqrt{3 + x_n}, \mbox{ for all } n \in \mathbb{N} \\ \bullet & x_1 = 1, \ x_{n+1} = \frac{4x_n + 2}{x_n + 3}, \mbox{ for all } n \in \mathbb{N} \end{array}$$

 $\fbox{Given } x_n = \frac{1}{n} + \frac{1}{n+1} + \ldots + \frac{1}{2n} \text{ , prove that } (x_n) \text{ is decreasing and bounded then conclude it is convergent.}$ 

Exercises (Cauchy criterion)

 ${\small \bigcirc} \ \ \, {\rm Show \ by \ definition \ that} \ (x_n) \ \, {\rm is \ a \ Cauchy \ sequence}$ 

$$x_n = \frac{5n}{n+3}$$

**2** If  $(x_n)$  satisfies

$$|x_{n+1}-x_n|<\frac{1}{2^n}$$

prove that  $(x_n)$  is a Cauchy Sequence.

If

$$x_n = \sum_{k=1}^n \frac{1}{k^2}$$

< ロ > < 同 > < 三 > < 三 >

prove that  $\left( x_{n}\right)$  is a Cauchy sequence.

Exercises (Subsequences)

**(**) Prove that the sequence  $(x_n)$  has a convergent subsequence

$$x_n = \frac{(n^2 + 20n + 30)\sin(n^3)}{n^2 + n + 1}$$

- Give an example of
  - a sequence with no convergent subsequence
  - ② an unbounded sequence which has a convergent subsequence
- (a) If every subsequence of  $(x_n)$  has a subsequence which converges to 0, prove that  $\lim x_n = 0$
