

Concise Review of Molecular Pathology of Breast Cancer

Edited by Mehmet Gunduz

Cancer is one of the leading causes of death in most countries and its consequences result in huge economic, social and psychological burden. Breast cancer is the most frequently diagnosed cancer type and the leading cause of cancer death among females. In this book, we discussed gene expression and DNA abnormalities including methylation in breast cancer. A recent important topic, roles of miRNAs...

Chapters

1. Breast Cancer- It's All in the DNA

By Somaira Nowsheen, Khaled Aziz, Asef Aziz and Alexandros G Georgakilas

Open access peer-reviewed

2. DNA Methylation

By Majed S. Alokail and Amal M. Alenad

Open access peer-reviewed

3. Genome-Wide Gene Expression Analysis to Identify Epistatic Gene-Pairs Associated with Prognosis of B

By I-Hsuan Lin and Ming-Ta Hsu

Open access peer-reviewed

4. MicroRNA in Breast Cancer — Gene Regulators and Targets for Novel Therapies

By Yunus A. Luqmani and Maitham A. Khajah

Open access peer-reviewed

5. MicroRNAs as Therapeutic Targets in Human Breast Cancer

By Hacer Esra Gurses, Omer Faruk Hatipoğlu, Mehmet Gunduz and Esra Gunduz

Open access peer-reviewed

6. Plasminogen Activator System — Diagnostic, Prognostic and Therapeutic Implications in Breast Cancer

By Catherine Leurser and Shafaat Ahmed Rabbani

Open access peer-reviewed

7. Bioinformatics in Breast Cancer Research

By Beyzanur Yigitoglu, Eyyup Uctepe, Ramazan Yigitoglu, Esra Gunduz and Mehmet Gunduz

Open access peer-reviewed

8. Relationship of Breast Cancer with Ovarian Cancer

By Ayşe Çelik, Muradiye Acar, Catherine Moroski Erkul, Esra Gunduz and Mehmet Gunduz

Open access peer-reviewed

9. Enantiomerically Pure Substituted Benzo-Fused Heterocycles — A New Class of Anti-Breast Cancer Age

By Joaquín M. Campos, M. Eugenia García-Rubiño, Nawal Mahfoudh and César Lozano-López
