RESEARCH INTEREST:

My research is focuses on the construction of nanostructured, organic-inorganic hybrid materials for various applications. Understanding of the growth of nanostructures and designing novel materials such as organic-inorganic hybrid, gel-nanoparticles, liquid crystal and carbon nanoparticles is our main interest. Our research work addresses four major themes related to the applications of materials:

- **Metal nanoparticles and Nanocomposites as Electro catalyst:**
Controlling the size and morphology of nanoparticles is an interesting area for electrocatalytic research. After tuning the structures of these nanomaterials, we, are achieving the efficient catalytic activity to promote the oxidation and reduction reactions for fuel cells.
- **Carbon and Metal Nanoparticles Based Materials for Electrochemical Supercapacitors:**
Electrochemical supercapacitors (ES) are needed as components in many advanced power systems requiring high power density. To achieve the high power density, our research interest in electrochemical supercapacitors is related to the development of electrode materials using metal oxide and hetroatoms doped carbon nanostructures.
- **Fabrication of Nanomaterials for Energy saving Lights (OLEDs):**
Currently our research is focused on the development of new light emitting device technologies for flat panel displays. One technology that shows promise involves organic light emitting diodes (OLEDs). These devices are built form a variety of different molecular and polymeric materials, which serve as electron and hole carriers, sites of recombination and luminescent zones.
- **Detection, Degradation and Removal of Inorganic and Organic pollutants form aqueous solution:**

Our research also focused to fabricated nanocomposites such as polymeric nanocomposites, carbon based nanocomposites and used for water treatments, and removal of organic and inorganic contaminants in wastewater. On the other hand, we are using the nanocomposites for photocatalytic degradation of pollutants in aqueous solution.
