Collage of Applied Medical Sciences

Department of Community Health Sciences

Community Nutrition

CHS 345

Level 7 , clinical nutrition program

First mid-term exam

First semester 1436-1437

Student name:

Student number:

First question: Complete the sentences below (4 marks)

1. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
2. **Community** is a social group determined by geographic boundaries and/or common values and interests.
3. **Advertising** is an example of environmental factors that influence food choice.
4. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.

Second question: Choose TRUE or FALSE for each statement (3 marks)

5. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
6. **Community** is a social group determined by geographic boundaries and/or common values and interests.
7. **Advertising** is an example of environmental factors that influence food choice.
8. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.

Third question: Choose the correct answer: (8 marks)

9. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
10. **Community** is a social group determined by geographic boundaries and/or common values and interests.
11. **Advertising** is an example of environmental factors that influence food choice.
12. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.
13. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
14. **Community** is a social group determined by geographic boundaries and/or common values and interests.
15. **Advertising** is an example of environmental factors that influence food choice.
16. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.

17. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
18. **Community** is a social group determined by geographic boundaries and/or common values and interests.
19. **Advertising** is an example of environmental factors that influence food choice.
20. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.
21. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
22. **Community** is a social group determined by geographic boundaries and/or common values and interests.
23. **Advertising** is an example of environmental factors that influence food choice.
24. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.
25. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
26. **Community** is a social group determined by geographic boundaries and/or common values and interests.
27. **Advertising** is an example of environmental factors that influence food choice.
28. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.
29. **Biochemical tests** is one of the methods for assessing nutrition status that measure body fluids such as blood, and/or feces, and/or urine for nutrients or metabolites that indicate deficiencies, infection, or disease.
30. **Community** is a social group determined by geographic boundaries and/or common values and interests.
31. **Advertising** is an example of environmental factors that influence food choice.
32. **Indicators** are variables that are used to measure change and assess whether the program has achieved its goals.
