Lab 3 Relationship Between Classes

Once you are done writing the classes, you need to test your work by implementing the class Lab3 with main method. There is no need to ask the user to enter the objects information; you can enter the information to create the objects in the constructors.

Lab3 Class:

Write the main and do the following:

1. Create six different Employee objects.
2. Create two Section objects of size 5.
3. Add the Employee to the sections, three Employees per section.
4. Create Company object of size 3.
5. Add the two sections to the Company.
6. Show all information in the Company.
7. Delete one Employee from each section.
8. Show the result. (Company Show all)
9. Delete one section.
10. Show the result after the delete. (Company Show all)

Early Blackboard submission:

- Submit the .java files in a zip format.
File -> Export -> General (archive file) -> select .java files from src folder.
 - Submit screenshots of the actual run from the console.
-

Helpful tips and hints:

- To auto generate Getters and setters go to
Source -> Generate Getter and Setter
- To invoke the Auto Formatter for your code : Ctrl + Shift + F
- For auto complete: Ctrl + space
- To Undo: Ctrl + z
To Copy: Ctrl + c
To Paste: Ctrl + v
To Save: Ctrl + s
- - private, + public, # protected.
