Create a web page including a small and simple form to deal with **a makeup shop database** that has a table called "**cosmetics**" based on the following scheme:

Cosmetics						
Product ID	Product name	Make (brand)	Production date	Expiry date	Color	price

Hint: choose the appropriate data type for each field.

Create a database using **SQL Code** to manipulate the table and add buttons to perform the following actions:

1. Insert a new product to the table.
2. Delete a specific cosmetic product giving its ID.
3. Update any information related to a specific cosmetic product giving its ID.
4. Provide a way to show the data stored in the table.
