write a C++ code for a program that ask the user to :

- ✓ Declare two numbers num1 and num2 then initialize them with 10 and 2. Then print out the addition of the two numbers. (evaluation)

```
The first number is: 10
The second number is: 2
************************
The addition= 12
************************
```

- ✓ Modify the previous program to read num1 and num2 from the user then calculate (addition-subtraction-multiplication-division) of the two numbers. (Home work)

```
Enter the first number :10
Enter the second number :2
************************
The addition= 12
The subtraction= 8
The multiplication= 20
The division= 5
************************
```
