Statistical Analysis Using Minitab

Part (1): Introduction to Using Minitab

You can download Minitab from www.minitab.com.

Detailed help is available here:

https://www.minitab.com/uploadedFiles/Documents/getting-started/Minitab17_GettingStarted-en.pdf

Once Minitab is successfully installed, double click the Minitab icon to launch the program. The software should start and you should see a screen similar to the figure below. As you can see from the figure, the Minitab window is separated into two parts. The top part is called the Session window and the bottom part is called the Worksheet. The Session window allows you to run syntax-based commands and also shows the results from whichever procedure you run. The Worksheet window displays your data. The rows are numbered (1, 2, 3, ...) and the columns are labeled as C1, C2, C3, The cell located under the column labels are there to rename the column how you see fit. To rename C1, for example, double click the tan colored cell under C1 and type in a name.

We start with either entering data or loading it from a file. To enter data by hand, simply click on the cell, type in the entry, and click Enter. Try renaming C1 as 'Example 1' and entering the following numbers into the first column: 4, 5, 3, 7, 10, 8, 8, 7, 6, 11. Your screen should look similar to the figure below. Next, let's try loading the data from a file. The data file for this example is located in the Datasets folder labeled as example2.txt. To open this data in Minitab, click on File > Open Worksheet.... Go to the location on your computer where the example2.txt file is located. Since the data is not in Minitab format (saved as a .txt file), make sure that Files of type: says All(*.*). Click on example2.txt and finally click Open. The first figure below shows you what your screen should look like. Once you click open, you should see a new Worksheet in Minitab and can click back and forth between them.

We explain how to use data code and change Data Type

1-Data code enables us to use codes for the given data as

Numeric to text

Text to numeric

Example:

If you have 10 students with the variable gender (Male, Female), use the code male=1 and female. Apply Text to numeric and Numeric to text and

2-Change Data Type enables us to change the entire variable into different data types

Numeric to text

Text to numeric

Example:

If you have 10 students with the variable phone number. Apply Text to numeric and Numeric to text to switch between different data types.

1-2 Calculations (Calc)

Many mathematical and statistical calculations can be achieved from the following list of commands

For more details, see the book:

Minitab Cookbook -by Isaac Newton (Author)

We discuss some commends from the above list as:

1- Calculator...

The are many mathematical operations can be done for the different columns of data through using the following window (Also, this can be done directly using Minitab editor)

Calcu	llator								\times
C1 C2	x y	Store result in variable: Expression:							
									^
		I							\sim
			_					Functions:	
		7	8	9	+	=	<>	All functions	•
		4	5	6	-	<	>	Absolute value	^
		1	2	3	*	<=	>=	Any	۰.
		0		[]	1	A	nd	Arcsine	
1					**	C	Dr	Arctangent	~
	Select				()	N	ot	Select	
		_							
			Assig	in as	a for	mula			
	Help							OK Cance	

Functions

The list of different functions can be found and categorized into different types as:

unctions:	
All functions	•
All functions	~
Arithmetic	
Column functions	
Date/Time	
Logarithm	
Logical	
Statistics	~

• Arithmetic

Example: Find exp(10) and $\sqrt{7}$

```
MTB > let k3=exp(10)
MTB > let k4=sqrt(7)
MTB > print k3
Data Display
K3 22026.5
MTB > print k4
Data Display
K4 2.64575
```

• Logarithm

Example: Find ln(100) and log(100)

• Statistics

Examples (mean)

Column	Calculator expression	Result
C1 contains 6, 3, 15	MEAN (C1)	8
C1 contains 6, C2 contains 3, and C3 contains 15	RMEAN (C1, C2, C3)	8

2- Standardize...

Example of Standardize

1. Open the Standardize dialog box.

DATA - - > Standardize

- 2. In Standardize, enter column(s) need to be standardized.
- 3. From Method, select Subtract the mean, then divide by the standard deviation.
- 4. Click OK.

Results

The standardized columns are in the worksheet together with the given data

example

C1	C 3	C4	C5
х	У	Standardize x	Standardize y
9.5	70.6	-0.99293	0.95796
8.4	73.3	-1.18466	2.07910
9.8	66.2	-0.94064	-0.86674
11.0	70.1	-0.73147	0.73166

3- Random Data

Generating random samples from both discrete and continuous distribution can be done through the use of the following list of distributions

			Sample From <u>C</u> olumns
Calc Stat () Calculator Calculator Column S Column S Row Statis S=0 Standardiz Make Patt Make Mes Make Mes Make Mes Make Mes Make Mes Make Mes Make Mes Make Mes Make Mes Make Mes 1, 2) X cting) at letion of c	Graph Edi f tatistics terned Data terned Data terned Data terned Data terned Data terned Data terned Data terned Data terned Data	tor <u>T</u> ools	Chi-Sguare <u>N</u> ormal <u>M</u> ultivariate Normal <u>F</u> <u>t</u> <u>U</u> niform Bernoulli <u>B</u> ernoulli <u>B</u> ernoulli <u>B</u> ernoulli <u>B</u> ernoulli <u>D</u> iscrete <u>D</u> oisson
