

# Syllabus

## Computational Physics

### PHYS-400

**Textbook:** Introductory Computational Physics, Andi Klein and Alexander Godunov, 2006, Cambridge university press.

**References:** Computational Physics with Python, Eric Ayars, 2013, California State University.

List of Topics	No. of Weeks
<b>1. Introduction</b> <ul style="list-style-type: none"> <li>○ The need for computers in science.</li> <li>○ What is computational physics?</li> <li>○ Operating systems and programming languages.</li> </ul>	2
<b>2. Interpolation</b> <ul style="list-style-type: none"> <li>○ Linear interpolation</li> <li>○ Polynomial interpolation</li> <li>○ Lagrange interpolation</li> </ul>	2
<b>3. Numerical differentiation</b> <ul style="list-style-type: none"> <li>○ Forward difference</li> <li>○ Central difference and higher order methods</li> <li>○ Higher order derivatives</li> </ul>	2
<b>4. Numerical Integration</b> <ul style="list-style-type: none"> <li>○ Rectangular method</li> <li>○ Trapezoid method</li> <li>○ Simpson method</li> </ul>	2
<b>5. Solution of nonlinear equations</b> <ul style="list-style-type: none"> <li>○ Bisection method</li> <li>○ Newton's method</li> <li>○ Method of secants</li> </ul>	2
<b>6. Differential equations</b> <ul style="list-style-type: none"> <li>○ Euler method</li> <li>○ Numerical errors and instabilities</li> <li>○ Runge-Kutta method</li> </ul>	3
<b>7. Monte-Carlo methods</b> <ul style="list-style-type: none"> <li>○ Random number generators</li> <li>○ Distribution functions</li> </ul>	2
<b>Total</b>	15
